Dhananjay Pal. The Healing Power of Mind and Theoretical Approach to Develop a So-Called Panacea through the Consciousness Model. *American Journal of Modern Physics*. Vol. 2, No. 6, 2013, pp. 402-416. doi: 10.11648/j.ajmp.20130206.28

Abstract: A single field emerged at the origin of the universe, already containing within itself the blueprint of the physical universe. The primordial single field triggered the onset of the universe. Most physicists believe that a single super-force dominated the first instants of creation. Scientists have arrived at a simple but decisive conclusion that consciousness is very much a part of the universe, like other objects. Our consciousness model involving thought-carrying particle (TCP), thought retaining particle (TRP) and thought force (T_F) signifies the existence of universal consciousness that exists along with the universe. This universal consciousness is a functional state of the universal mind (UM). This UM is evolved at the Big Bang from void. The UM is constituted by these TCP and TRP in the inherent presence of thought force (T_F). Thought force (T_F) is an expression of universal consciousness. The Thought force (T_F) being the primordial quantum field functions as the original super-force. T_F being the original super-force functions as the origin of all the fundamental fields. TCP is the carrier of thought force (T_F) that, in turn, appears to be the origin of all the fields. The quantized energy (ϵ_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ϵ_T . The same ϵ_T is the energy responsible for generating thought force (T_F). T_F being an expression of the universal consciousness is applicable to any inanimate object as well as to any biological system (having thinking ability). The T_F exerts its functions both *in vitro* and *in vivo*. Any matter as well as any individual mind is constituted by these TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo* and these TCP and TRP are originated from the same Void. These TCP, TRP and the thought force (T_F) *in vitro* and thought force (T_F) *in vivo* play significant roles in understanding the healing power of mind. The consciousness model involving the TCP, TRP and T_F (thought force) may provide guidelines to develop a panacea through the utilization of the universal power of 'vital living force' (called 'Prāna', the Indian concept of 'life energies').

Keywords: Void, Cosmic Microwave Background Radiation (CMBR), Universal Mind (UM), Thought Force (T_F), Thought-Carrying Particle (TCP), Thought Retaining Particle (TRP), Quantized Energy (ϵ_T) of TCP

1. Introduction

In Eastern philosophical traditions, consciousness is intrinsic to the universe, whereas in most Western views, consciousness is extrinsic, emerging from complex computation. How can these views be reconciled?

It is most relevant and important to indicate the names of various eminent physicists like Erwin Schrödinger, Eugene Wigner, Brian Josephson, John Wheeler, Roger Penrose, Henry P Stapp, Freeman J. Dyson, Paul Davies, David Bohm, Basil Hiley, Fritjof Capra, Fred Alan Wolf and Amit

Goswami who have addressed the inclusion of consciousness in their work. Consciousness is to be taken into account.

1.1. In contrast to the usual linear sequence of matter, body, life, brain, mind, consciousness, here the proposed cyclic sequence is first universal consciousness (a functional state of the universal mind), and then matter, body, life, brain, and regeneration of mind and consciousness. The evolution of life with mind and consciousness is possible purely due to the inherent existence of universal consciousness which exists along

with the universe. The human nervous system is evolved to provide an appropriate material structure to individualize the universal consciousness, a characteristic of reality, pervading all manifestations.

Consciousness model of Pal *et al* [1-3] involving TCP, TRP and thought force (T_F) signifies the existence of universal consciousness that exists along with the universe. Pal *et al* [3] showed that this universal consciousness is a functional state of Universal Mind (UM). Pal *et al* [3] explained that the UM is evolved at the Big Bang from the eternal Void. This Void, in turn, is the source of infinite energy. And this UM is a finer matter. The individual mind being a constituent of the UM is also a finer matter. The constituents of the UM and individual mind are the same. The ultimate constituents of matter and mind are the same as both mind and matter are aspects of one fundamental reality, which is called UM. The brain is the mediating link or interface between the individual mind and body.

Pal *et al* [3] explained that the constituents of the UM are the ultimate constituents of matter itself as everything in this universe is a manifestation of this UM. Pal *et al* [3] expressed that the UM is constituted by these TCP and TRP in the inherent presence of thought force (T_F). Pal *et al* [1, 3] further explained that the ultimate constituents of matter and mind are these TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*.

Physicists determined that underlying quantum fields give birth to elementary particles. Bhaumik [4] mentioned that Frank Wilczek pointed out, "In quantum field theory, the primary elements of reality are not individual particles, but underlying fields. Thus, for example, all electrons are but excitations of an underlying field, naturally called electric field". The same holds true for all the fundamental particles of which matter is made.

The existence of matter depends on the existence of force and vice versa. TCP cannot exist without TRP and vice versa. Many physicists believe that unifying all the forces, including gravity, into a single theory would require a phenomenon called super-symmetry. With super-symmetry, every fermion would have a boson twin, and vice-versa. The thought force (T_F) is carried by the TCP in the presence of its super-symmetrical partner TRP. TCP that behaves like boson should accompany its super-symmetrical partner TRP that functions like fermion in the generalized simpler way. It is to be noted that these TCP and TRP function like wavelike: wave-particle duality.

2. Thought Force

Pal *et al* [1, 3] and Pal [5] explained the existence of thought force (T_F). Thought force (T_F), an expression of the universal consciousness, is the primordial quantum field that, in turn, functions as the primary unified field. This T_F being an expression of the universal consciousness is applicable to any inanimate object as well as to any biological system (having thinking ability). Thus the T_F being an expression of the universal consciousness exerts

its functions both *in vitro* and *in vivo*.

Physicists determined that underlying quantum fields give birth to elementary particles. Pal [5] expressed that the thought force (T_F) is the primordial quantum field. Thought force (T_F) being the primordial quantum field functions as the primary unified field. Thought force (T_F) being the primordial quantum field gives birth to TRP that appears to be the origin of all the matter particles. TCP is the carrier of thought force (T_F) that, in turn, appears to be the origin of all the fields. TCP thus appears to be the origin of all the field particles.

In a purpose to involve both the non-living and living systems of the world, Pal [5] has shown the existences of these TCP, TRP and thought force (T_F) *in vitro* and thought force (T_F) *in vivo*. Anyone can call this TCP by any other name, but as the highly developed living system will have to be evolved in the universe in the long run and as the thought of highly developed living system appears to be a kind of force to be called the thought force (T_F) *in vivo*, we considered it is wise to call it as TCP. Further, as the universe exists along with the universal consciousness that, in turn, is created by the quantized energy (ϵ_T) of TCP, we had to use the term TCP.

Pal [5] expressed that the non-living system of the world is governed by the thought force (T_F) *in vitro* and this Thought force (T_F) *in vitro* gives rise to T_F (micro), SNF, EMF, WNF, GF and T_F (macro) where T_F (micro) = Thought force in microcosm, SNF = Strong nuclear force, EMF = Electromagnetic force, WNF = Weak nuclear force, GF = Gravitational force and T_F (macro) = Thought force in macrocosm. It is to be noted here that T_F (micro) is a stronger force than the SNF and T_F (macro) is a weaker force even than the GF.

Pal [5] also expressed that the living system of the world is governed by the thought force (T_F) *in vivo* and this Thought force (T_F) *in vivo* is a type of force that represents the biological 'thought' which is the action of mind. This 'thought' being a type of force controls the 'thought processes' involving the firing of neurons through the quantum mechanical activities of these TCP and TRP in the presence of consciousness. Consciousness in living organisms is a process which involves the quantum mechanical activities of these TCP and TRP, the ultimate constituents of any matter as well as any mind in the inherent presence of thought force (T_F) *in vitro* and the thought force (T_F) *in vivo* as indicated by Pal *et al* [3]. This consciousness, in turn, is the quantized energy (ϵ_T) of TCP. The thought force (T_F) *in vivo* is demonstrated in numerous experiments in which thought has an effect on a physical process (often known as mind over matter). This biological 'thought' is a type of force that can cause movement. Controlling movement through thought alone is observed in several experiments conducted by many scientists as indicated by Pal [5]. These experiments thus signify the existence of thought force (T_F) *in vivo*.

Pal [5] explained the existence of T_F (micro) (= Thought force in microcosm). This T_F (micro) is the strongest

interaction (a new class of ‘extra strong’ interaction). It is stronger than SNF (Strong Nuclear Force).

Pal [5] has also shown the existence of T_F (macro) (= Thought force in macrocosm). It is the “weakest force”

$$\varepsilon_T = 4.384 \times 10^{-16} \text{ erg} \equiv 2.73 \times 10^{-4} \text{ eV} \equiv 2.73 \text{ K} \equiv \text{CMBR temperature} \equiv 2.725 \text{ K} .$$

This conversion of $\text{erg} \equiv \text{eV} \equiv \text{K}$ is given by Weisskopf [6] as follows:

$$1 \text{ erg} \equiv 0.6241807 \times 10^{12} \text{ eV} \text{ and } 10^{-4} \text{ eV} \equiv 1 \text{ K}$$

2.2. Pal et al [3] expressed that the CMBR temperature is due to ε_T , the quantized energy of TCP where

$$\varepsilon_T = 4.384 \times 10^{-16} \text{ erg} \equiv 2.73 \times 10^{-4} \text{ eV} \equiv 2.73 \text{ K} \equiv \text{CMBR temperature} \equiv 2.725 \text{ K} .$$

As per Pal et al [3], it is interesting to note that all of the three different equations ultimately give rise to the same result that is equivalent to the CMBR temperature. A sort of relationship is thus observed between the ε_T and the CMBR temperature. This coincidence is thus signifying a probable role of TCP on the maintenance of CMBR temperature. Further, this coincidence is also signifying the existence of these TCP in the presence of TRP. TCP cannot exist without TRP and vice versa. The presence of TCP, TRP and Thought force (T_F) in the universe is thus indicated and expressed mathematically. At present we are unable to explain when and how these TCP and TRP decoupled from the primordial cosmic soup.

Pal et al [1, 3] showed that the quantized energy (ε_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ε_T . Ultimately this ε_T represents universal consciousness. The existence of CMBR temperature indicates the existence of the TCP in the presence of TRP. The existence of TCP ensures the existence of the thought force (T_F). Further, this T_F being an expression of the quantized energy (ε_T) of TCP exerts its functions both *in vitro* and *in vivo*.

3. What is life?

Life is a state of flux that is being maintained by a typical form of energy which is nothing but the consciousness itself. Pal et al [3] and Pal [7] showed that the quantized energy (ε_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ε_T . Pal et al [1, 3] and Pal [7] explained that life may be defined as a state of functional manifestation of consciousness that, in turn, is the quantized energy (ε_T) of TCP. This ε_T represents universal consciousness.

Thus,

which is much weaker even than the gravity.

2.1. Pal et al [3] developed three different equations expressing the quantized energy (ε_T) of TCP. The value of ε_T in one of the three equations is shown below:

$$\text{Life} = f(\text{Consciousness}) = f(\varepsilon_T) \quad (1)$$

where ε_T = quantized energy of the TCP = $4.384 \times 10^{-16} \text{ erg}$.

$$\varepsilon_T = h \nu_T = hc / \lambda_T = 4.384 \times 10^{-16} \text{ erg} \quad (2)$$

where

ε_T = quantized energy of the TCP = $4.384 \times 10^{-16} \text{ erg}$,

ν_T = frequency of the TCP = $\varepsilon_T / h = 66.12 \times 10^9 \text{ Hz} = 66.12 \text{ GHz}$,

h = Planck’s quantum constant = $6.63 \times 10^{-27} \text{ erg} \cdot \text{sec}$,

c = free-space velocity of light = $3 \times 10^{10} \text{ cm} / \text{sec}$,

λ_T = wave-length of the TCP = 0.4537 cm .

3.1. What is Consciousness?

Psychologists, neuroscientists, philosophers, and other professionals continue to engage in an ongoing debate as to what consciousness means. In reality, we may never know. Is it a product of the biological and classical physical interactions of the human brain; or is it something more fundamental, perhaps electromagnetic, or the result of quantum physics principles that we don’t yet fully understand? Could it be something even more profound than that -- something beyond the scope of science and physics, any kind of physics, for us to understand?

According to the ancient Vedanta, consciousness is not an emergent property of matter that comes into existence only through the functioning of the human nervous system. Instead, consciousness is a characteristic of reality, pervading all manifestations. This unbounded field of nature’s universal consciousness is not limited to an individual consciousness. From this viewpoint, the role of the human nervous system is to provide an appropriate material structure to individualize the universal consciousness. It appears that inanimate matter itself cannot generate consciousness without the inherent existence of universal consciousness.

Pal et al [2] explained, “Consciousness is the realization

of existence, and there are as many states of consciousness as there are states of existence. Every living being has a consciousness of its own depending on complexity of the brain and the activity of the viable numbers of TCP in the presence of TRP; and the state of its consciousness changes every moment of time. Consciousness is the perception of the relation it bears to things and as this relation changes, consciousness changes its character. Consciousness itself does not change; it only moves up and down on the 'scale of the realization' of existence through the 'sub-conscious', 'conscious' and 'super-conscious' states". There is another term called unconscious state. The most usual unconscious state is sleep. A deeper form of unconsciousness is called a coma.

3.2. Consciousness may be Defined as the 'Self-Organized' Capability of any Living being to Activate TCP and TRP

Pal et al [3] expressed that consciousness may be defined as the 'self-organized' capability of any living being to activate TCP and TRP, the ultimate constituents of mind and matter and to exert its functions. What can generate, maintain and activate TCP and TRP is called animate having 'active consciousness' and what cannot is called inanimate, i.e., devoid of active consciousness. As anything inanimate does neither have the power to activate the TCP and TRP nor have the capability to catalyze the activity of TCP and TRP, so it cannot generate consciousness. On the contrary, anything animate has the 'self-organized' power to generate, activate and catalyze the activity of TCP and TRP in order to generate and maintain consciousness along with the vital living force. Prigogine *et al* [8] explained "*Self-Organization in Non-Equilibrium Systems*".

Consciousness in living organisms is a process which involves the quantum mechanical activities of these TCP and TRP, the ultimate constituents of any matter as well as any mind in the inherent presence of thought force (T_F) *in vitro* and the thought force (T_F) *in vivo* as indicated by Pal *et al* [1, 3]. And these TCP and TRP govern the activities of neurons (not the other way round). Neurons are simply the equipments used to generate consciousness and awareness. The consciousness itself is functioning as an inter-linking agent between the animate and inanimate through the quantum mechanical activities of these TCP and TRP indicated by [3].

3.3. Existence of Universal Consciousness

Pal et al [3] and Pal [7] showed the existence of universal consciousness and explained that the quantized energy (ϵ_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ϵ_T . Many physicists agree with the idea that consciousness is non-local, fundamental in the universe and consciousness is very

much a part of the universe, like other objects. It is to be noted that ϵ_T , the quantized energy of TCP represents universal consciousness.

Nelson [9], Director of Global Consciousness Project, has observed through the experimentation that coherent consciousness creates order in the world; and subtle interactions link us with each other and the Earth. When human consciousness becomes coherent and synchronized, the behavior of random systems may change. Quantum event based random number generators (RNGs) produce completely unpredictable sequences of zeroes and ones. But when a great event synchronizes the feelings of millions of people, our network of RNGs becomes subtly structured. The probability is less than one in a billion that the effect is due to chance. The evidence suggests an emerging noosphere, or the unifying field of consciousness described by sages in all cultures. This evidence signifies and proves the existence of universal consciousness.

The existence of universal consciousness is explained by Radin [10] through experimentation as it is expressed in his book *The Conscious Universe: The Scientific Truth of Psychic Phenomena*. Further, Consciousness, not matter, is the ground of all existence, declares University of Oregon physicist Goswami through his published (1993) book, "*The Self-Aware Universe: How Consciousness Creates the Material World*".

As per Penrose [11], consciousness is a part of the universe. Van De Bogart [12] explained, "Since consciousness is a part of the universe it then follows that all consciousness, and the universe, are of the same matrix of energy fields".

4. Possible Relation of Consciousness with Mind

Modern scientists have not even been able to arrive at a consensus on what should be a definition of the totality of consciousness. The brain is intricately linked to the process of consciousness and consciousness is thought to be a phenomenon of the mind.

It appears that

$$\text{Consciousness} = f(\text{mind}) \quad (3)$$

Consciousness is the functional state of mind. Presence of consciousness signifies the presence of mind and vice versa.

It is apparent that

$$\text{Animate} \neq \text{Inanimate} \quad (4)$$

Three critical factors which distinguish life from non-living are consciousness, metabolism and reproduction.

In a gross presentation, we can express from the equation (4):

$$\text{Animate} - \text{Consciousness} = \text{Inanimate} \quad (5)$$

Scientists would have to define and characterize consciousness properly. We should have the proper knowledge about the exact characteristics of consciousness in order to address many present day scientific enigmas.

5. What is the Exact Definition of Mind? What is Mind?

We observe a great controversy concerning the exact definition of mind. There are two apparently opposite views: one is the substantial view and the other is the functional view.

In the substantial view, the mind is a type of substance. Mind is a finer matter having an autonomous existence. Mind is a single entity, perhaps having its base in the brain but distinct from it. In its most extreme form as in the Indian Upanishads and Vedanta, the mind is not only a finer matter but also it is an entity wholly separate from the body, in fact a manifestation of the soul, which will survive the body's death in the form of the spiritual body or mental body [called Linga Sharira or Sukshma Sharira in Sanskrit] as expressed by Vivekananda [13] who indicated that this mental body bears all the mental impressions. This mental body is also called 'spirit'.

In the functional view, the mind is closely related to the functions of the brain and can have no autonomous existence beyond the brain, nor can they survive its death. In this view, mind is a 'state' created by the activities of the brain with other parts of the nervous system as it is indicated by cognitive neuro-scientists and Artificial Intelligence (AI) scientists. According to them 'minds are simply what brains do'. In this functional view, mind is a subjective manifestation of consciousness: the human brain's ability to be aware of its own existence. The concept of the mind is therefore a means by which the conscious brain understands its own operations.

The modern cognitive neuroscientists generally accept the fact that the "mind" is not an isolated entity and the mind is a state created by the activities of brain with other parts of the nervous system (CNS, PNS along with ANS). Although the mind is generally accepted to be an abstract having no spatial location or public observability, yet it is a type of fine matter according to the ancient Indian Upanishads and Vedanta. The Vedanta indicates that the universe exists along with the universal consciousness. Pal *et al* [1, 3] explained that this universal consciousness is a functional state of the Universal Mind (UM). This UM is constituted by these TCP and TRP which, in turn, are the ultimate constituents of any matter and any mind in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*. It is to be noted that these TCP and TRP are the ultimate constituents of any matter in the inherent presence of thought force (T_F) *in vitro*. And these TCP and TRP are the ultimate constituents of any mind in the inherent presence of thought force (T_F) *in vivo*. Pal *et al* [1, 3] explained that any matter as well as any individual mind

is constituted by these TCP and TRP in the inherent presence of Thought force (T_F) *in vitro* and Thought force (T_F) *in vivo*.

Modern Scientists are not yet able to understand how the brain works to make the mind. They know that brain has got neurons that communicate across synapses by releasing a neurotransmitter, and that generates electrical impulses, and the receiving neuron then talks to its neighbor neurons the same way. If the mind depends on the brain, then all aspects of the mind are going to depend on these simple electrical, chemical processes. According to this concept, the existence of the UM requires the existence of the universal brain to form the UM. The concept of universal brain is not logically acceptable. Thus the concept that the mind depends on the brain becomes questionable if the existence of the UM is valid.

5.1. It appears that scientists would have to decide in a purpose to conclude clearly whether mind is a 'state' (created by the activities of the brain with other parts of the nervous system as it is indicated by the functional view of mind) or 'a finer matter' (as it is indicated by the Indian Upanishads and Vedanta).

6. Special Characteristics of Mind and Consciousness

- 1 The basic mystery of the mind is how does it emerge from pure matter? How do those units that are made of tiny particles, give rise to the unique and essentially private, experience called consciousness? Do the particles that constitute our brain determine what we think and do? Do these tiny particles ultimately govern the thinking ability of the bioelectrical system? Or, are we free to have our own will? Is consciousness just froth sitting on top of the brain's electronics? How consciousness is being operated? Why should a bunch of atoms have thinking ability? Gross answers to all these inquiries are possible if we accept these TCP and TRP as the ultimate constituents of mind and matter in the inherent presence of thought force (T_F) *in vivo* and thought force (T_F) *in vitro* as indicated by Pal *et al* [3]. It is to be noted that the thought force (T_F) being a primordial quantum field exerts its functions both *in vitro* and *in vivo*.
- 2 Modern Scientists are not yet able to understand how the brain works to make the mind. They know that brain has got neurons that communicate across synapses by releasing a neurotransmitter, and that generates electrical impulses, and the receiving neuron then talks to its neighbors the same way. If the mind depends on the brain, then all aspects of the mind are going to depend on these simple electrical, chemical processes. According to this concept, the existence of the UM requires the existence of the universal brain to form the UM.

The concept of universal brain is not logically acceptable. Thus the concept that the mind depends on the brain becomes questionable if the existence of the UM is valid.

- 3 We are what our minds make us. The mind is a very powerful controller of the body. The mind controls everything as indicated by Pal *et al* [1, 3] and Pal [7]. Mind is conditioned from the time we are young. It gives our abilities, our perceptions, our character and the way we think. From science to religion, from politics to economics, everything is controlled by the human mind. We perceive, we believe and we react. Things that matter are what we think they are. The quest for truth is bafflingly elusive, after all what is the 'truth'? We have come to the realization that if I believe it is true, it indeed is true for me, regardless of how incredible you may think it is. Experiments do not matter, arguments do not matter, reality does not matter, in fact, matter does not matter---it is all in the mind. As a joker succinctly put it, "It is a case of mind over matter—I do not mind and you do not matter".
- 4 Consciousness model of Pal *et al* [1-3] involving TCP, TRP and thought force (T_F) signifies the existence of universal consciousness that exists along with the universe. Pal *et al* [3] showed that this universal consciousness is a functional state of Universal Mind (UM). Pal *et al* [3] explained that the UM is evolved at the Big Bang from the eternal Void. This Void, in turn, is the source of infinite energy. And this UM is a finer matter. The individual mind being a constituent of the UM is also a finer matter. The constituents of the UM and individual mind are the same. The ultimate constituents of matter and mind are the same as both mind and matter are aspects of one fundamental reality, which is called UM. The brain is the mediating link or interface between the individual mind and body. Pal *et al* [3] explained that the constituents of the UM are the ultimate constituents of matter itself as everything in this universe is a manifestation of this UM. Pal *et al* [3] expressed that the UM is constituted by these TCP and TRP in the inherent presence of thought force (T_F). Pal *et al* [1, 3] further explained that the ultimate constituents of matter and mind are these TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*.
- 5 Current scientific views regarding the origin of consciousness vary widely and range from an 'epiphenomenon' arising from neuronal networks, to neuronal quantum processes, to a separate undiscovered scientific entity.
- 6 Consciousness is the functional state of mind. Presence of consciousness signifies the presence of mind and vice versa. It is to be understood that consciousness is the realization of existence and consciousness moves up and down on the 'scale of the realization' of existence through the 'sub-conscious', 'conscious' and 'super-conscious' states as indicated by Pal *et al* [2].
- 7 Consciousness may be defined as the 'self-organized' capability of any living being to activate TCP and TRP, the ultimate constituents of mind and matter and to exert its functions. What can generate, maintain and activate TCP and TRP is called animate having 'active consciousness' and what cannot is called inanimate, i.e., devoid of active consciousness.
- 8 Continuity of consciousness is found through the experimental observations of Parnia[14], Lommel [15], Fenwick [16] and Beauregard & O'Leary [17 & 18] and demonstrate the existence of consciousness during the cessation of brain activity and thus support the existence of universal consciousness as well as substantial view of mind as indicated by the Indian Upanishads and Vedanta.
- 9 Everything in this universe is interlinked and intertwined through the existence of the quantum mechanical activities of these TCP in the inherent presence of TRP. Pal *et al* [1, 3] showed that the quantized energy (ϵ_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ϵ_T . Ultimately this ϵ_T represents universal consciousness. This universal consciousness functions as a universe wide web (uww) covering the universe as a whole with all its parameters (including void) and inhabitants (with or without consciousness). In this picture, uww of consciousness, quantum concepts like wave particle dualism, position momentum uncertainty, non-locality and concept of unified field become somewhat understandable as all the entities of this universe are interlinked and intertwined. In this picture, the universal consciousness replaces ether of yesteryears and contains the whole of the universe in its fold. The 'spooky action-at-a-distance' may thus be built in nature through the existence of these TCP and TRP in the presence of thought force (T_F).
- 10 In a purpose to conclude clearly, it appears, that scientists would have to decide whether mind is a 'state' (created by the activities of the brain with other parts of the nervous system as it is indicated by the functional view of mind) or 'a finer matter' (as it is indicated by the Indian Upanishads and Vedanta).

7. Plausible Drawbacks of the Functional View of Mind

1. The science of the mind may be connected with the science of the body. It is possible that the modern mind has been developed to get its present shape by the directive of the UM. The mind is an all-purpose computer responding impartially to the world around it; and this mind had, through natural selection, evolved to respond in a particular way to particular environmental circumstances. Humans are 'adaptation executors' carrying out programs written into the mind's machinery long ago. "The machinery does not know its own programming", said Cosmides and Tooby [19-21], intellectual leading evolutionary psychologists. The evolutionary psychologists see the mind as pre-programmed, made up of specialized mechanisms--'modules' or 'organs'. The evolutionary psychologists argue that their job is to approach the mind as an ancient engineering project, developing and testing out hypotheses about what 'designed problems' needed solving. Evolutionary psychologists thus signify the existence of the UM. Such an approach offers a badly needed bridge between psychology and the natural sciences. A plausible bridge between psychology and the natural sciences can be achieved through the developed consciousness model.
2. Growing evidence of the continuity of consciousness demonstrates the existence of consciousness during the cessation of brain activity. In a purpose to determine the nature of human mind and consciousness as well as its relationship with the brain, Parnia[14], Lommel [15], Fenwick [16] and Beauregard & O'Leary [17 & 18] observed through different lines of experiments and through studies of cardiac arrest survivors that the cerebral functioning as measured by electrical activity of the brain ceases during cardiac arrest. Sam Parnia [14] observed in the cardiac arrest survivors that the human mind and consciousness continue to function in the absence of brain function when there is cardiac arrest. Thus observations in these studies of cardiac arrest survivors raise the possibility that human mind and consciousness may continue to function in the absence of brain function. This indicates the existence of universal consciousness. The nervous system is evolved to individualize this universal consciousness that, in turn, exists along with the universe. These experimental observations support the substantial view of mind as indicated by the Indian Upanishads and Vedanta.
3. Continuity of consciousness indicates the existence of universal consciousness that exists along with the universe. This universal consciousness is to be taken into account, but usually ignored. Many physicists agree with the idea that consciousness is non-local, fundamental in the universe and consciousness is very much a part of the universe, like other objects. This universal consciousness is a functional state of the UM that, in turn, is a finer matter. Both, mind and matter are aspects of one fundamental and underlying reality, which is called Universal Mind (UM). The functional state of the UM is the universal consciousness that exists along with the universe. It appears that inanimate matter itself cannot generate consciousness without the inherent existence of this universal consciousness.
4. As per the ancient Vedanta, everything in this universe is a manifestation of the UM. This UM is a finer matter. The individual mind being a constituent of the UM is also a finer matter. The constituents of the UM and individual mind are the same. The ultimate constituents of matter and mind are the same as both mind and matter are aspects of one fundamental reality, which is called UM. The brain is the mediating link or interface between the individual mind and body.
5. Pal *et al* [3] explained that the constituents of the UM are the ultimate constituents of matter itself as everything in this universe is a manifestation of this UM. Pal *et al* [3] expressed that the UM is constituted by these TCP and TRP in the inherent presence of thought force (T_F). Pal *et al* [1, 3] further explained that the ultimate constituents of matter and mind are these TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*.
6. According to the Vedanta, consciousness is not an emergent property of matter that comes into existence only through the functioning of the human nervous system. Instead, consciousness is a characteristic of reality, pervading all manifestations. This unbounded field of nature's universal consciousness is not limited to an individual consciousness. From this viewpoint, the role of the human nervous system is to provide an appropriate material structure to individualize this universal consciousness.
7. The human nervous system is evolved to provide an appropriate material structure to individualize the universal consciousness, which is a characteristic of reality, pervading all manifestations. This unbounded field of nature's 'universal consciousness' is not limited to an individual consciousness.
8. We are what our minds make us. The mind is a very powerful controller of the body. It appears that the mind controls everything. Mind exerts its role from the very beginning of life. It governs our abilities, our faculties, our perceptions, our attitudes, our character and the way we become habituated to think through the utilization of the instrumental

- brain.
9. Freeman J. Dyson said, "It appears that mind, as manifested by the capacity to make choices, is to some extent inherent in every atom".
 10. If mind has the capacity to make choices then this quality is demonstrated by atoms which make unpredictable choices between alternate possibilities according to the laws of quantum mechanics. "If the quality of mind is present at the atomic level, this suggests a return to the Vedantic concept of a Universal Mind (UM) which pervades all matter: a concept in agreement with the conclusion of University of Oregon physicist Amit Goswami. This UM must have been present at the inception of the universe".
 11. Consciousness, not matter, is the ground of all existence, declares University of Oregon physicist Goswami, echoing the mystic sages of his native India. He holds that the universe is self-aware, and that consciousness creates the physical world. Matter is an expression of mind, not separate from mind, but mind manifested materially.
 12. Example of three friends with different mental qualities. Let us take the popular example of a case of three friends visiting an ocean. If it is observed that one of them is frightened, other one is delighted and third person remains indifferent on the first sight of an ocean provided that they have not come in contact with the ocean before, then what should be the interpretation of mind that is related to the functions of the brain? These three different persons use their eyes and brains as the same type of instrument to look at the ocean. Here, the usual functioning of brain mechanism is not producing the same result on these three specified persons. The differences in the qualitative experiences are not due to the different functioning of the brain mechanism. The qualitative feelings are absolutely personal and mental. The brain is functioning as an instrument to generate different types of qualitative feelings in the different persons depending on their mental status. This mental status of a man is the result of the sum total of all the previous mental impressions (of previous lives) that he is not able to remember in this present life, because he has already lost all the previous brains. Further, this mental status is not the outcome of the activities of the brain with the other parts of the nervous system. The mind or the mental status does not depend on the activity of the brain. All our qualities are basically mental. If the brain is the cause and the mind is the effect, then who is controlling our mental qualities? The brain does not generate and control mental qualities. The brain is simply the biologically evolved fine instrument through which the mental impressions as well as mental qualities are expressed and maintained.
 13. We sometimes use the terms like 'beautiful mind' or 'vicious mind'. When we say that John Nash has a 'beautiful mind' (vide the cinema of same name), we do not simply mean that he has a beautiful brain only. On the contrary, we like to indicate that he has a special power within himself to utilize his brain for producing beautiful results for which we conclude that he has a 'beautiful mind'. In other words, the mental status or the inner mental power of John Nash enforces him to apply his brain in such a special way that the ultimate result is beautiful. The brain is nothing but a fine instrument through which the mind exerts its functions and the mind possesses the inner power (or mental qualities). When the mind desires to do something as per its mental impressions, it exerts its functions through the brain with other parts of the nervous system.
 14. Driving force of love and hate. We always find the action of 'driving forces' like "Attractive and Repulsive forces" which are the outcome of the emotional power of love, hate, fear and other emotional aspects of the mental world. Mind and consciousness generate and control all these driving forces. I would not like to go to a person whom I hate but I would be eager to go to a person whom I personally love. This emotional aspect of my mental world is controlling my physical movements through my nervous system. These vital interactions manifest their actions in the external physical world through the movements of the physical body. And these active interactions are controlling the physical movements of almost all the living beings, thus signifying the fact that the mind is a very powerful controller of the body.
 15. Mind and mental qualities control the body through the utilization of the brain with other parts of the nervous system in the presence of sense organs. Strokes and fatal accidents sometimes cause complete paralysis but leave 'thought processes' of the victims untouched, trapping the 'active mind' in a motionless body. It indicates that the brain is functioning as the inter-linking device between the body and mind. It is also to be noted that human beings in 'coma' state do not exhibit significant consciousness in the presence of 'life function'. This is due to the malfunction of the brain that is the proper instrument through which the mind exerts its functions with the help of TCP and TRP. These TCP and TRP are ultimately responsible to generate consciousness and awareness. Pal et al [3] expressed that the quantized energy (\mathcal{E}_T) of the TCP represents consciousness.
 16. Soul (Void) exerts its functions through the finer instrument called mind. This mind, in turn, exerts its functions through the brain with other parts of nervous system (CNS, PNS along with ANS).

17. The eternal Void has been covered by the mind to function as the Soul of the individual being. In the universe, behind the UM, there is a Soul (\cong VOID). In the individual, behind the individual mind (which is a constituent of the UM), there is also a Soul (\cong VOID). Any matter as well as any individual mind is constituted by these TCP and TRP that, in turn, are originated from the same eternal Void. Thus the individual mind is operated by these TCP and TRP that, in turn, are ultimately governed and operated by the same eternal Void. The individual mind being a constituent of the UM has covered the eternal Void to serve the role of individual 'Soul'. This eternal Void is thus the common source and the source is still with us indicated by Bhaumik [4]. This Void serves the role of Soul being covered by the mind. The mind-brain and brain-body links which are addressed by psychology, cognitive science, neuroscience and neurophysiology are, in our proposition, ultimately governed by the quantum mechanical activities of these TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*. Consciousness that signifies the realization of existence is a functional state of mind.
18. This Soul (\cong VOID) being the master ruler of the body exerts its functions through the finer instrument called mind. This mind (with the help of TCP and TRP), in turn, exerts its functions through the brain with other parts of nervous system (CNS, PNS along with ANS) in the biological systems in order to grasp this physical universe, of course, in the inherent presence of consciousness. This consciousness is created and maintained by the quantum mechanical activities of these TCP in the inherent presence of TRP. Thus any matter (as well as any mind) being ultimately composed of these TCP and TRP should have some sort of 'mind' as Dyson indicated. The more the development of the organized brain, the more the degree of manifestation of consciousness indicated by Pal et al [2]. This consciousness itself is acting as an inter-linking agent between the animate and inanimate through the quantum mechanical activities of these TCP in the presence of TRP. Thus these TCP and TRP being the ultimate constituents of mind as well as matter play the most significant roles in many present day scientific enigmas.
19. Consciousness in living organisms is a process which involves the quantum mechanical activities of these TCP and TRP, the ultimate constituents of matter and mind in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo* indicated by Pal et al [1-3]. And these TCP and TRP govern the activities of neurons (not the other way round). These neurons are simply the equipments used to generate consciousness and awareness. The consciousness itself is functioning as an inter-linking agent between the animate and inanimate.
20. The quantum mechanical activities of these TCP and TRP could also explain self-organization.
21. Josephson et al [22] explained that both psychokinesis and telepathy might be found in quantum physics. It is our view that both psychokinesis and telepathy can be thoroughly interpreted through the consciousness model involving the quantum mechanical activities of TCP and TRP in the inherent presence of thought force (T_F) *in vitro* and the thought force (T_F) *in vivo*.
22. It appears that the development of 'self-organization' is possible through the generation and maintenance of consciousness by the quantum mechanical activities of these TCP and TRP, the ultimate constituents of matter and mind in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*.
23. Conclusion of Parnia [14] is human consciousness may work independently of the brain. Just because the brain is damaged does not necessarily mean that the "mind" is affected. This observation indicates that consciousness owes its origin to the universal consciousness. This consciousness, in turn, exists along with the universe; and thus consciousness is independent of the brain. Damaged brain does not necessarily mean that the "mind" is affected, thereby signifies the substantial view of mind but not the functional view of mind.
24. The notions of a person's "spirit" and "soul" often overlap, as both contrast with body and both are imagined as surviving the bodily death in religion and occultism, and "spirit" can also have the sense of "ghost" (such as demons or deities) i.e. manifestations of the spirit of a deceased person. Barking of a pet dog looking at the window in a purpose to threaten and drive out 'something unwanted' appears to indicate the probable presence of something or someone that is nothing but a 'spirit' which is a spiritual body or mental body [called Linga Sharira or Sukshma Sharira in Sanskrit] indicated by Vivekananda [13]. Usually the human eye cannot recognize this spirit or mental body, but dogs and cats can do so. Functional view of mind cannot explain the possible existence of a spirit or a mental body.

8. Characteristics of Soul (\cong VOID), Consciousness, Mind and Brain

Consciousness model of Pal *et al* [1-3] involving TCP, TRP and thought force (T_F) signifies the existence of universal consciousness that exists along with the universe. Pal *et al* [3] showed that this universal consciousness is a functional state of the Universal Mind (UM). Pal *et al* [3]

explained that the UM is evolved at the Big Bang from the eternal Void. The UM is constituted by these TCP and TRP in the inherent presence of thought force (T_F). This thought force (T_F) is an expression of universal consciousness.

These TCP and TRP, the constituents of the UM and the ultimate constituents of any matter as well as any mind are conceived here to be originated from the eternal Void at the Big Bang to evolve the space-time continuum and the UM along with the universal consciousness.

Pal *et al* [3] explained that the eternal Void has been covered by the mind to function as the Soul of the individual being. In the universe, behind the UM, there is a Soul (\equiv VOID). In the individual, behind the individual mind (which is a constituent of the UM), there is also a Soul (\equiv VOID).

Pal *et al* [3] explained that Soul (\equiv Void) being the master ruler of the body exerts its functions through the finer instrument called mind. The mind (with the help of TCP and TRP) exerts its functions through the brain and spinal cord (CNS) along with the other parts of the nervous system (PNS along with ANS) in the biological systems in order to grasp this physical universe, of course, in the inherent presence of consciousness. This consciousness itself is acting as an inter-linking agent between the animate and inanimate through the quantum mechanical activities of these TCP and TRP. Consciousness is defined here as the 'self-organized' capability of any living being to activate TCP and TRP, the ultimate constituents of any matter as well as any mind. This consciousness, in turn, is the quantized energy (\mathcal{E}_T) of TCP.

Any matter as well as the individual mind is constituted by these TCP and TRP that, in turn, are originated from the same eternal Void. Thus the individual mind is operated by these TCP and TRP that, in turn, are ultimately governed by the same eternal Void. The individual mind being a constituent of the UM has covered the eternal Void to serve the role of individual Soul. This eternal Void is thus the common source and the source is still with us indicated by Bhaumik [4]. This Void serves the role of Soul being covered by the mind.

9. Mind and its Apparent Power

Any matter (as well as any mind) being ultimately composed of these TCP and TRP should have some sort of 'mind' as Dyson indicated. The more the development of the organized brain, the more the instrumental facility and thus more the degree of manifestation of consciousness as indicated by Pal *et al* [2]. This consciousness itself is acting as an inter-linking agent between the animate and inanimate through the quantum mechanical activities of these TCP and TRP. Thus these TCP and TRP being the ultimate constituents of any matter as well as any mind play the most significant roles in many present day scientific enigmas. As mentioned earlier, consciousness may be defined as the 'self-organized' capability of any living being to activate TCP and TRP, the ultimate constituents of

matter and mind, and to exert its functions.

We are what our minds make us. The mind controls everything. Mind itself being constituted and operated by these TCP and TRP plays a very significant role to control the body through the instrument called brain with other parts of the nervous system. The mind is a very powerful controller of the body. If a person genuinely believes a particular treatment will positively benefit him or her, then quite often, such treatment works wonders. The stark realities of Placebo Effects have been reported over and over again, especially in a well-known article in the New York Times Magazine ('The Placebo Prescription' by Margaret Tallbot, 9 January, 2000).

The placebo effect is the result of the power of suggestion. If anyone believes a white pill will cure him/her, it probably will. Medical research shows that depending upon the condition, 35% to 75% of patients receiving dummy pills get cured. Asthmatics were given fake inhalers and they not only got relief, but their airways were measurably dilated. In India, the use of 'MANTRAS' coupled with inexplicable diets and questionable practices such as vomiting, enemas and purging seem to give effectively positive results.

There is also Nocebo Effect. The placebo is the positive reinforcement, the nocebo is negative reinforcement. If anybody believes a white pill will cure him / her aches, it will, even if it is just sugar. Similarly, if anyone is convinced that no silly pill will cure his / her headache, then nothing will, even if it is the highly effective Aspirin.

The widely held opinion is that using the placebo effect is simply fraud. It is unethical for a doctor to give any patient a useless pill in the hope that his / her mind will cure the physiological disharmony. But is it unethical if the placebo cures anybody?

The mind controls everything through the quantum mechanical activities of these TCP and TRP with which any matter as well as any mind is ultimately constituted as indicated by Pal *et al* [3]. Mind is conditioned from the time we are young. It governs our abilities, our perceptions, our character and the way we think. Things that matter are what we think they are. It appears that the quest for truth is bafflingly elusive, after all what is the 'truth'? We have come to the realization that if I believe anything to be true, it indeed is true for me, regard-less of how incredible others may think it is. Experiments do not matter, arguments do not matter, reality does not matter, in fact, matter does not matter---it is all in the mind. Someone may humorously say, "It is a case of mind over matter—I do not mind and you do not matter to me".

10. Faith Healer and Mind Medicine

A study conducted at Duke University Medical Center in Durham, North Carolina (USA) among African-Americans practicing a religion shows that faith lowers blood pressure. "Religious coping seems to be an effective way to cope with everyday stress", says Steffen *et al* [23], the lead

researcher whose study has been published in the 'Psychosomatic Medicine' (August, 2001). The white subjects in the study generally relied on religion less than the African-Americans, and religious practices did not seem to affect the whites' blood pressure. Among blacks, however, those who described themselves as actively religious had systolic blood pressure readings about six points lower than those who were not.

11. Four Claimed Health Benefits of Prayer

- 1 Repetition: Certain forms of prayer or meditation, such as repetitive 'mantras', can lower secretion of stress hormones, improve brain functioning and help remedy insomnia. However, very few of the studies have been published in the peer-reviewed scientific journals.
- 2 Being prayed for: A controversial study published in the 'Archives of Internal Medicine' a couple of years ago claimed that patients who are prayed for—even if 'unknowingly' or 'remotely' --- experience lower complications and have a shorter hospital stay compared to patients not receiving such 'prayers'.
- 3 The kneeling edge: In a recent report in the 'Journal of Gerontology' (August, 2001) researchers from Duke University Medical Center showed that healthy older adults who participate in private religious activity---prayer, meditation or bible study---appear to have a survival advantage over those who do not.
- 4 Protective protein: Another controversial study on a Protestant locality of North Carolina in the US claimed to have found high levels of a protective protein (inter-leukin-6) in adults who attended church at least once a week.

These studies indicate the prominent role of mind that is operated by these TCP and TRP, which in turn, are the ultimate constituents of any matter also.

12. Mind Medicine: Pleasure Guards Brain: Stress Impairs Memory but Relaxation may Reverse it

A set of experiments shows that stress can damage cells in a region of the brain called the hippocampus which plays a key role in learning and memory. Why do we choke under pressure? Over-attention to known skills mars performance. Beilock and Carr [24] published their data in 'Journal of Experimental Psychology' advising, "Take your mind off". Their data support the 'explicit monitoring' hypothesis that too much worrying about a task which is closely observed hurts its performance—an idea that has been borne out anecdotally by athletes and performers. Taking one's mind

off and adopting a nonchalant attitude helps tackle the problem, suggest the researchers.

Four tips to lessen choking chances: (1) Self-confidence, (2) Stress management, (3) Winning concentration, (4) Imagery and visualization.

13. Healing Beyond the Body

Dossey [25] tried to develop the interrelationship of consciousness, spirituality and healing. Dossey [25] in his book, 'Healing Beyond the Body: Medicine and the Infinite Reach of the Mind' writes, "Brains are captives of space and time; not so, minds". He cites philosopher-scientist David Darling's analogy: The brain cannot produce consciousness any more than a TV set can produce the programs on its screen. Each brain may be physically distinct, yet all can access a collective consciousness.

Not only does my mind affect my body, Dossey [25] continues, it can affect your body and, ultimately, the entire universe. Because we are all connected, not only with one another but also with all matter and energy, the slightest disruption anywhere in the universe can have far-reaching effects.

This is possible only through the existence and quantum mechanical activities of these TCP and TRP, the ultimate constituents of any matter as well as any mind in the inherent presence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo*. Pal et al [3] expressed that everything in this universe is interlinked and intertwined through the existence of the quantum mechanical activities of these TCP in the presence of TRP. The quantized energy (ϵ_T) of TCP is responsible to cause the universal consciousness as well as the cosmic microwave background radiation temperature. The individual consciousness owes its origin to the universal consciousness created by the same ϵ_T .

Ultimately this ϵ_T represents universal consciousness. This universal consciousness functions as a universe wide web (uww) covering the universe as a whole with all its parameters (including void) and inhabitants (with or without consciousness).

There is convincing experimental evidence for the effect of prayer on microbes, seeds, and humans, and for the prescience of ESP (Extra-sensory perception). There is nothing new in a unified mind that is simultaneously accessible to all. In this unified mind, where the entire universe is linked, concepts like immortality, omniscience, and omnipresence are natural destinations. "It is impossible in principle for any scientific theory to disprove the existence and workings of the Absolute," Dossey [25] writes.

14. Conclusion and Outlook of This Part

Dossey [25] convincingly explains mysteries of traditional, holistic, and alternative medicine. Prayer cloths,

practical jokes, and even words written on prescription pads have healing power. For true healing to take place, Dossey [25] concludes, doctors and patients alike must acknowledge and incorporate the power of mind as a distinct universal principle. Each of us--and, through our collective consciousness, all of us--has the power to heal. Dossey's version of the Golden Rule is: "Do good unto others because they are you!" This is the quintessence of Advaita Philosophy (non-dualistic Vedanta) of India.

15. The Relationship between Consciousness and Vital Living Force (\cong Prâna, the Indian Concept of Life Energies)

Fritjof Capra [26] expressed, "Both kinds of interconnectedness---that between mind and body and that between organism and environment---would have to be interpreted in terms of tentative notions of energy patterns. The Indian concept of 'Prâna' and the Chinese concept of ch'i are to be taken into account as examples of traditional terms referring to these 'subtle energies', or 'life energies'. In these traditional disciplines illness is seen as resulting from changes in the patterns of energy and therapeutic techniques have been developed to influence the body's energy system".

According to the ancient Indian Vedanta, this Universe is composed of 'Âkâsha' and 'Prâna' as indicated by Vivekananda [27]. 'Âkâsha' is the origin of all the observable matter. And 'Prâna' is the origin of all the natural fields along with vibrations (Thought). This natural field includes the 'vital living force' which, in turn, controls all the psychological as well as the physiological functions of all living beings of the universe. It is to be noted that this Prâna \cong the Indian concept of 'life energies'. And this vital living force as well as the thought force is usually ignored.

It is to be noted that Prâna (\cong 'vital living force') \cong thought force (T_F) *in vitro* + thought force (T_F) *in vivo* + T_F (micro) + T_F (macro).

Pal [5] explained vividly the existence of thought force (T_F) *in vitro* and thought force (T_F) *in vivo* and other aspects of Thought force (T_F) like T_F (micro) and T_F (macro) along with all their characteristics.

Swami Vivekananda [27] expressed: Is the physical body of a living being cause of manifestation of the Soul (\cong Void) or 'vital living force' (called Prâna, the Indian concept of 'life energies')? What makes this body? What force causes the atoms to combine in a specific sequence and takes up specific atoms from the mass of matter around us in order to provide different shapes of different species of specific bodies of living beings? It is logical to say that the force which makes up the matter and forms the body, is the same force which is responsible for causing and maintaining the psychological as well physiological functions of the living organisms. This specific force is called "Prâna", the Indian

concept of 'life energies'. The sum-total of the energy displayed in the universe is called Prâna indicated by Vivekananda [27]. This Prâna is thought to be the 'universal power'. The Prâna is the gross origin of all the fundamental fields including the 'vital living force' which controls all the psychological as well as the physiological functions of all living beings of the universe. TCP is the force-carrying particle of the original thought force (T_F) which is the origin of all the existing natural fields. Thus, this "Prâna" is more or less equivalent to the original thought force (T_F) which is carried by TCP in the inherent presence of TRP. Does this Prâna generate consciousness? Or does the consciousness create Prâna? Are they inter-dependent or intra-dependent? It is apparent that the consciousness being a typical form of energy can initiate the function of Prâna. Life may be defined as a state of functional manifestation of consciousness that, in turn, is the quantized energy (\mathcal{E}_T) of the TCP. This \mathcal{E}_T represents consciousness.

As a separate entity, the Prâna as well as consciousness appears to be independent or they may appear to be inter-dependent; but, after the initiation of the function of Prâna in a living organism, they are intra-dependent. Thus, when this specific Prâna (\cong 'vital living force') is eliminated from the living organism, then that living being is said to die.

Pal [5] expressed that the thought force (T_F) being the primordial quantum field functions as the original single primary unified field that is not only the origin of all the four fundamental fields along with both the T_F (micro) and T_F (macro) but also the origin of thought force (T_F) *in vivo*.

Thus, the original thought force (T_F) which is the primordial quantum field and which is an expression of the universal consciousness represents 'Prâna' that, in turn, is the origin of all the natural fields (including the vital living force) and TRP represents 'Âkâsha'. This 'Prâna' is manifested as nerve-current as well as the biological 'thought force' also. And all the psychological and physiological activities are controlled and maintained by this same 'Prâna' itself.

15.1. The "Prâna" is the grosser form of the original thought force (T_F); its energy should be the quantized energy (\mathcal{E}_T) of the TCP as it is expressed by Pal [5, 28] through the evolution of universe from the void:

$$\begin{aligned} \text{Void} \rightarrow E_T &= \mathcal{E}_T = m_T c^2 = h\nu_T = hc/\lambda_T \\ &= 4.95 \times 10^{-16} \text{erg} \end{aligned} \quad (6)$$

where,

E_T = total energy of the universe,

\mathcal{E}_T = quantized energy of the TCP = 4.95×10^{-16} erg

m_T = quantized mass of the TCP = $\mathcal{E}_T/c^2 = 5.5 \times 10^{-37}$ g,

h = Planck's quantum constant = 6.63×10^{-27} erg.sec,

ν_T = frequency of the TCP = 7.466×10^{10} cps,

λ_T = wavelength of the TCP radiated by the radiant

mass of the universe = $hc/\mathcal{E}_T = 0.4018$ cm.

16. Interpretation of the Indian Concept of MANTRAS-JAPA through the Quantum Mechanical Activities of these TCP and TRP

The 'MANTRA' is the vehicle through which one can arrive at the 'super-conscious' state via consciousness. Any pronounced word or 'vibration' can function as a 'MANTRA' provided it should have the vibrant power to cause sufficient vibration in the mind. When a Yogi (meditator) wants to recognize his own divine immortal existence through the vigorous concentration of his mind in order to find out the origin of the mind, then he will have to abolish or deactivate the activity of the elements (i.e. TCP and TRP) of the mind. This can be done only by elevating the conscious mind to its super-conscious state in a purpose to arrive at its own field of origin which itself is the 'Void' (\cong BRAHMAN \cong Absolute). This 'void' is the source of infinite energy.

The power of the 'MANTRA' depends on the power to dissociate the mind in order to arrive at the origin of the mind through the release of the TCP and TRP from their bound state called mind. Thus the pronounced words that have this capability are regarded as 'MANTRAS'. Although any word can serve the function of 'MANTRA', yet there are certain proved specific words that are utilized as 'MANTRAS' for several thousand years.

'RAMA' is a word as well as a 'MANTRA'. If the word 'RAMA' cannot stimulate any vibration in my mind, then it is not a 'MANTRA' to me at all – it is just like other ordinary words in the normal sense. The inherent power of 'MANTRA' of the word 'RAMA' is dependent on the degree up to which extent it can generate vibration in the mind; and it would function as a 'MANTRA' only to that extent or intensity.

There should be a connection between the inanimate word and mind; and these two should positively come in contact with the 'consciousness' if the word itself is to function as a 'MANTRA'. Thus 'MANTRA-JAPA' is the effort to direct the combined word-mind complex towards the universal consciousness through the vehicle of individual consciousness. JAPA is the repeated recitation of the 'MANTRA' with honest faith and respect.

It is to be noted that the "PRANABA" itself is the so-called "NADA BRAMHAN".

Any pronounced 'word' has its origin to the 'PRANABA' / 'ONKAR' (OM) [i.e. "NADA BRAMHAN"]. And every pronounced 'word' ends in the vibration of 'PRANABA' / 'ONKAR' (OM). The 'PRANABA' / 'ONKAR' (OM) is a word as well as a 'MANTRA'. The OM, mind and the effort to arrive at the field of consciousness should vibrate in a line so that there should be a resonance. It appears that UTF (universal thought frequency) \cong frequency of the TCP \cong frequency of the "Prâna" = 7.466×10^{10} cps \cong frequency of ONKAR (OM).

As the "Prâna" is the grosser form of the original thought force (T_F), so it is apparent that the frequency of the TCP \cong frequency of the "Prâna" = 7.466×10^{10} cps \cong frequency of ONKAR (OM).

It is to be understood that the "PRANABA" itself is the so-called "NADA BRAMHAN". It is apparent that the original frequency of ONKAR (OM) should have the same universal thought frequency (UTF) that, in turn, is the same frequency of TCP itself that is found to be 7.466×10^{10} cps. When the frequency of pronounced "OM" attains its original frequency that, in turn, is the frequency of TCP (or the frequency of the "Prâna"), then and then only the "OM" can function as the real 'MANTRA'. Any word can thus serve the function of 'MANTRA' if the frequency of the pronounced word attains the frequency of the "Prâna" or the original frequency of ONKAR [i.e. "NADA BRAMHAN"].

When it is possible to create an impression on the mind by repeated recitation of OM in a purpose to express the fact that the OM is nothing but the name or representation of the Almighty God, then and then only it is called 'ONKAR-JAPA'. JAPA is the active process that causes mind to arrive at the primary field representing universal consciousness. Thus consciousness reveals its manifestation to our existence or self-entity through the JAPA. JAPA enforces mind to go to its origin.

17. Role of Prâna (\cong 'Vital Living Force' \cong the Indian Concept of 'Life Energies') to Control any Disease and its Function to Derive a Panacea

A disease is nothing but a physiological (or psychological) disorder usually caused by the invasion of pathogenic microorganisms (including Virus) or by a congenital defect in the functional organ itself within the living organism or by mental disorder.

It is also well known that a drug / medicinal agent cannot produce any new action. It can either stimulate or depress the physiological or psychological function in order to regularize it to its normal level of function, thereby alleviating the so-called disorder or disease. A drug or medicinal agent is used to restore the normal physiological (or psychological) functions.

As the "Prâna" controls all the psychological as well as physiological functions of all the living beings, so it is easy to understand that any disorder or disharmony of the physiological (or psychological) function can be regularized to its normal level by regulating the action of "Prâna" through the 'Prânâyâma', the breathing exercises. The breathing exercises bring about regulation of breathing, rhythmic action of the Prâna. 'Prânâyâma' means the control of Prâna indicated by Vivekananda [27]. When the balance of Prâna is disturbed, what we call disease is produced. It is thus apparent that the so-called Indian HOT YOGI can survive several thousand years by developing

the power to control and regulate the Prâna and thereby alleviating the physiological and psychological disorder called disease. Because the HOT YOGIS can regulate physiological and psychological disorder to its normal level of function by utilizing and applying the Prâna when there is any disease that is nothing but a physiological and/or psychological disorder.

When this Prâna works rhythmically within a functional living body, everything works properly. In tremendous physical or mental toil we become exhausted, because we use up so much Prâna. It is to be noted that this Prâna is not at all equivalent to ATP (Adenosine triphosphate) which is expressed as the "biological coin". This ATP is manufactured (*in vivo*) only due to the presence and action of Prâna through Krebs cycle.

The treatment through the so-called "Reiki" is a fundamental step towards developing a "panacea" by utilizing the universal power called "Prâna". A Japanese word, Reiki literally means 'spirit energy'. It is all about energy and Reiki teachers talk of flows of energy and how to harness it. Reiki practitioners believe that cosmic energy can be channeled for healing the mind and body by touch, which vitalizes the whole system and soothes pain. It can be passed from one person to another for 'cure'. Reiki masters say that all human beings, plants, and animals are sustained by Reiki or cosmic energy and any decrease or imbalance in the energy levels, caused due to disharmony between the various energy centers, result in sickness and disease. The cornerstone of the Reiki is considered to be the "The healing breath" practice. Through specific rhythms of the breath, it restores the natural cycles that harmonize the body, mind and emotions, and allows one's natural healing abilities to function freely. "The only way to discover yourself is through your breath". That, in a nutshell, is the essence of "Art of Living". Reiki experts usually say, "Breath is the connection between the mind and the body. We teach people how to breath properly and thus heal the mind and body".

18. Conclusion and Outlook

Capra [26] expressed that mind and life have become inseparably connected, with mind—or, more accurately, mental process—being immanent in matter at all levels of life. It has been obvious that getting sick and healing are both integral parts of an organism's self-organization. Since all self-organizing activity is mental activity, the processes of getting sick and of healing are essentially mental processes. Because mental activity is a multilevel pattern of processes, most of them taking place in the unconscious realm we are not always aware of how we move in and out of illness, but this does not alter the fact that illness is a mental phenomenon in its very essence. Hence it is apparent that all disorders are psychosomatic in the sense that they involve the continual interplay of mind and body in their origin, development, and cure.

In our proposition, the evolution of life and

consciousness is possible due to the directive of the UM the functional state of which is the universal consciousness. The UM is constituted by these TCP and TRP. The quantum mechanical activities of these TCP and TRP are responsible for creating RNA/DNA to evolve life as well as consciousness. We propose that the thought force (T_F) which is carried by the TCP is the origin of all the existing fields when TRP would be found to be the origin of all the existing matter particles. The "Prâna" is the grosser form of the thought force (T_F). Thus, all the functions of Prâna are liable to be governed by the quantum mechanical activities of the TCP in the inherent presence of TRP. This Prâna is the 'gross origin' of all the prevailing fundamental fields along with the 'vital living force'. If the force-carrying particle of this "Prâna" is thoroughly established and fully characterized, then this "Prâna" can be utilized as a "panacea" to cure any disease. It is probable that the TCP itself would be found to be the exact force-carrying particles responsible for this specific "interaction" called "Prâna".

As the "Prâna" is the grosser form of the thought force (T_F), so it is found from the Equation (6) that "Prâna" should have a frequency of 7.466×10^{10} cps. The mechanical generation and specific utilization of this characteristic specific frequency may provide guidelines to develop a panacea to cure any physiological (or psychological) disharmony or a disorder called disease.
