Received: June 3, 2017; **Accepted:** June 26, 2017; **Published:** October 23, 2017

Abstract: The study was undertaken to assess the Internet utilization by researchers in two selected special libraries in Kaduna state. The objectives of the study were to ascertain the type of Internet services that is provided in the special libraries; to know the purpose of using the internet by the researchers; to ascertain the particular Internet search engines researchers prefer to use to locate information on the Internet; to ascertain the degree of satisfaction with the use of Internet services by the researchers; to identify the challenges encountered while using the Internet by the researchers. Survey method of research was adopted. A total number of 102 copies of structured questionnaire were administered, out of which 88 were retrieved. Descriptive statistical tools such as simple percentages and tables were used to analyze the data. Findings of the study revealed that the Internet services mostly used by academic staff is e-mail services because it is important for every researcher to communicate their ideas or thoughts among them, and can send digital file to others as attachment. The study also revealed that the researcher use internet to search and obtain data for research and publication, access e-journals, sending and receiving e-mails etc. though some challenges were discovered to be a hindrance for effective utilization of the Internet by the researchers which include: slow internet service; internet connection failure; inadequate number of connected system. The study recommends that Efforts should be made to increase the speed of the Internet access and shorten the time it takes to view and download web pages by providing more bandwidths; Management of the institution should install internet services that will connect all the offices of the academic staff to enable them have access to internet facilities; More recent models computers should be provided and be connected to internet facilities in the libraries for patrons use; A maintenance programme should be put in place for regular maintenance, up-grading and repairs.

Keywords: Utilization, Internet Resources, Special Library, Information, Researchers

1. Introduction

The introduction of modern information technology has greatly changed the quality of work and activities in the libraries. It is becoming a vital component in the overall services and operations of library and information centers. Application of Internet and other network resources is changing the traditional library functions. Internet has become a basic ingredient of information accessibility and dissemination. According to Gbaje [1], the Internet is the network of networks linking millions of computer together. It

has the ability and capability to provide adequate, current, and timely services to information seekers wherever they are. Internet is a network of millions of computer linked together with telecommunication equipment for the purpose of sharing data, resources and information. Agbaje [2] refers to Internet as a veritable tool for global online services. Internet availability has paved the way for some associated services in respect of serials such as browsing, e-mail, online system and information management. The use of the Internet in

libraries and information centres makes available to the information user a wide range of learning resources available on the net especially the World Wide Web (www) and the electronic mail. In recent years, Internet and e-resources has emerged as a powerful educational information tools that has been spread technological literacy and given people all over the world fast access to vast resources [3]. Its availability has paved the way for some associated services in respect of serials such as browsing, e-mail, online system and information management.

Internet resources such as World Wide Web, e-mail, telnet, OPAC, search engines, File Transfer Protocol, digital collection, e-journal, chat group can be utilized by academic staff to enhance their research activities. Nwagwu et al [4] averred that the Internet serves as a source of information for literature review, authors search, subject search and research. Internet provides us with the means of carrying out research online by acting as the main engine for exchanging information especially among researchers [5]. Internet offers unprecedented access to information in all kind of formats. It brings advantages to its users in terms of searching for information, research, security and other related needs, in fact, that is why some universities and research institution established one form of Internet service or the other and researchers use Internet facilities regularly for their research work, leisure and discussions among others. With the rapid development and use of the Internet and web-based technology, publishing and distribution of information resources in digital format has become widespread [6]. The Internet has many benefits in the academic cycle including provision of round the clock access to a wide variety of information sources globally and the ability to discuss and share experience with colleagues.

A special library is a library maintained by an individual, corporation, association, government agency or any other group. It can also be defined as a specialized or departmental collection within a library for the organization and dissemination of information and primarily offering services to a specialized clientele through the use of varied media and methods [7].

To ensure that library services are given within the framework of users needs and in keeping with the aims and objective of that library, the application of Internet resources in special library is important.

1.1. Statement of Problem

There's no doubt that Internet plays a significant role in area of effective and efficient services in modern library. The introduction of the Internet technology has tremendously impacted on service delivery in libraries and information centres in the developed countries. In Nigeria, however, efforts are being made to strengthen the use of Internet particularly in library services delivery. Consequently, it is pertinent to investigate the use of Internet by researchers in special libraries in Kaduna. Although, various studies and observation indicates poor state of Internet application in

some Libraries. Omosokejimi, Ijiekhuamhen and Emuejevoke [8] study indicates that Internet connectivity is not regular and not consistently available, and users are not satisfied with its use. In view of the few studies on the use of Internet by researchers in special libraries, it is imperative to carry out this investigation. The study is to find out the Internet resources/services that are used in special library services in Kaduna metropolis by researchers for their research activities as well as their satisfaction in using this internet, and the search engines used by the researchers in locating information on the Internet.

1.2. Objective of the Study

- (1) To ascertain the type of Internet services that is provided in special libraries in Kaduna state
- (2) To know the purpose of using the Internet by the researchers
- (3) To ascertain the particular Internet search engines researchers prefer to use to locate information on the Internet.
- (4) To ascertain the degree of satisfaction with the use of Internet services by the researchers.
- (5) To identify the challenges encountered while using the Internet by the researchers.

2. Literature Review

2.1. Internet Services and Resources Available for Special Libraries

Internet services are the various services that are available in the Internet. In order to connect to the Internet, you need to use an Internet service. Internet services provide a way for data to be transferred from Internet servers to the computer. Components of the Internet are of different stages, which are interrelated and are backbone to its application. Muzakkari [9] asserted that Internet resources are the resources available in the net, which include: e-mail, chat groups, file transfer protocol, and so on.

Internet facilities such as e-mail, telnet, file transfer protocol, world wide web, Usenet, mailing list, can be used to enhance teaching and research. With such facilities, an academic staff can be able to have up-to-date information, know what is happening in his field of research somewhere around the globe, and share information with colleagues using the mailing list facility of the Internet [10]. Internet services are a major source by which library and information centres can effectively provide information services to its increasing population of users in this rapidly growing environment of information explosion and availability.

2.2. Purpose of Using Internet by the Researchers

Internet is a major source of knowledge and information. It is used to obtain vital resources for teaching and learning. Moman [11] evaluated the nature, extent, and satisfaction with the use of the Internet by Applied Science and

Technology faculty in Jordan. He concluded that the Internet is widely used with emphasis on research and communication and was perceived as a very useful tool. In the same vein, [4] asserts that the Internet serves as a source of information for literature review, authors search, subject search and research. The study conducted by Aliyu [12] on use of Internet by academic scientists revealed that 92.59% of the academic scientist use the internet for communication and support of study purposes respectively, while 61.72% and 56.79% use it for professional research activities and recreation. Asemi [13] in his study on Internet use in academic libraries discovered that the researchers of the university were getting quality information through the Internet. 50% of the researchers search for scientific information through the internet.

The study of [8] on the accessibility and use of Internet facilities in University libraries revealed that 95.8% of the respondents admits that they use the Internet services to access newly publish information resources, 100% for research and academic development, and 65.6% and 56.5% affirm that they use it for their project work and article publishing respectively. Also, 65.9% admits that they use it for assignment purposes, while 57.1% of them agreed that they use Internet for exchange of ideas among colleagues via social networks.

2.3. Search Engines Used by Researchers to Search and Locate Information in the Internet

Accessing information is an important and essential skill in the use of Internet by Libraries. According to Monereo, et al. [14] Search engines are system that can search the web using software robots/programmes for sites, read entire texts of the sites on the web, index them based on occurrence of the key words for each site, and enter them in database. In the same vein, Adesanya [15] opined that different types of search engines are available and work in different ways: some rely on people to maintain a catalogue of websites or pages; some use software to identify key information on sites across the Internet. These search engines includes: Google (<http://www.google.com>), Alta Vista (<http://www.altavista.com>), Lycos (<http://www.lycos.com>), Excite (<http://www.excite.com>) AskJeeves (<http://www.ask.com>), Yahoo (<http://www.yahoo.com>), MSN (<http://www.msn.com>) etc.

Search engine are medium through which searches are successfully conducted. Madhusudhan [16] conducted a survey on Internet use by research scholars at Delhi University, which reveals that most respondents used search engines more than subject gateways or web directories to locate information. Asemi [13] findings revealed that Google search engines are mostly used by the respondents while searching for information on the Internet with 68%, followed by Yahoo, AltaVista, MSN and HotBot with 61%, 15%, 11% and 4% preference respectively. The choice of Google and yahoo being that they are fast to access, information contained on these search engines are updated regularly and links are provided to websites in the world. Similarly, Devi and Singh [17] in their study found out that the respondents

mostly use Google 79.3%, followed by yahoo 39.2% and Rediff 25.6%.

2.4. Satisfaction Derived from Using the Internet by the Researchers

Use of Internet in library services is believed to have had tremendous effect in libraries and to researchers in searching for information. Ojedokun [18] stated that the internet has many benefits in the academic cycle including provision of round the clock access to a wide variety of information sources globally and the ability to discuss and share experience with colleagues. Findings in a research conducted by Al-Ansari [19] revealed that academic staffs are satisfied with available Internet resources because it helped them to save time and find up-to-date information. Also Mohammed [20] found in his study on the use of ICT based resources and services in special libraries of kerala that a good number 56.4% of the library staff and 50% of users of state Government institution libraries were satisfied with the availability and application of ICT in their libraries.

Internet has helped for easy accessibility and dissemination of information. Many libraries have their catalogue of books and non-books in the web and accessibility to those catalogues is made easier and possible through Internet. According to Oketunji [21] the role of the Internet is to provide a way for researchers to have access to each other and to serve as a tool that facilitate their research. With the use of the Internet services like discussion groups, e-mail, it is possible to post message which include request for information: seeking book titles or reference materials, asking for names and addresses of people who have expert knowledge in particular areas. Aqil and Ahmad [22] conducted a survey at Aligarh Muslim University to find out the status of Internet based resources usage by the users. It was discovered that Internet based resources are the most satisfactory for the research scholars and post graduate students, the found it most satisfactory for their academic activities.

2.5. Challenges Encountered While Using the Internet

The Internet resources have improved the overall access to information by researchers world wide. However, their use by the researchers poses some challenges. Salaam [23] in his study on the use of Internet service in Nigerian University libraries found poor telecommunication system, unreliable electrical supply, lack of internet service providers in some parts of the country and poor funding of the university system as the major problems militating against access and use of internet facilities. Ishola et al [24] carried out a study on the availability, accessibility and use of e-resources in selected private universities. It shows that erratic power supply was one factor affecting its use 99.32%; lack of adequate information, knowledge and retrieval skills 90.27%; high cost of ICT 85.52% and lack of updated ICT strategy 59.04%. The research conducted by [8] on the accessibility and use of Internet facilities in university libraries revealed

that slow Internet service 95.8%; internet connection failure 100%; shortage of funds for Internet services, and unavailability of support for maintaining Internet facilities 62.8% as the challenges that hinders proper use of the Internet. Nwokedi [25] asserts that lack of searching skills, still militate good use of Internet. He stated that acquisition of Internet skills can lead to discovery of valuable research and teaching resources, which would in turn, causes the users to use the Internet to enhance their research, teaching and learning capabilities. The study by [5] on use of the Internet by researchers in agricultural research institutes shows that slow Internet connections 75.51% is the major challenge in their use of the Internet followed by inadequate browsing skill.

3. Methodology

Survey method was adopted in this study. According to Osuala [26] survey research studies a group of people or items by collecting and analyzing data from a sample considered being representative of the entire group under study. It helps to discover the relative incidence, distribution and interrelations of variables.

The survey method was also used for the work because the nature of the study itself warrants the use of the survey method as it enabled the researcher to reach out to the study population in their different locations.

The population of this study was limited to the special libraries that have Internet services in the libraries which users have access to. Two (2) special libraries are involved in this study. They are: National Water Resources Institute, Mando, and Federal College of Forestry Mechanisation, Afaka, all in Kaduna State. The academic staff in the two special libraries formed the population of the study. One hundred and two (102) were sampled for this research.

Questionnaire and observation were used as instrument for data collection in the study areas. According to Akuezilo [27] posited that the survey researchers utilize instruments such as questionnaire, interview and direct observation in investigations. A well structured questionnaire with a cover letter was administered to the respondents. Its design reveals the bio-data and details of the five research questions which guided the course of this research. A total of eighty eight (88) questionnaires were adequately filled and used for the data

analysis.

4. Results and Findings

The collected data were analyzed using descriptive statistics comprising of frequency distribution tables and simple percentages. The data are analyzed and discussed below.

4.1. Internet Services Used in the Special Libraries of Kaduna State

Table 1 shows analysis of data concerning this issue

Table 1. Internet services used in the special libraries of Kaduna state.

S/No	Internet services	Total	
		Freq	%
1	Electronic Mail (e-mail)	85	96.6
2	World Wide Web (www)	48	54.5
3	Online Database	48	54.5
4	Internet chat/discussion groups	21	23.9
5	E-journals	71	80.7
6	Online Public Access Catalogue (OPAC)	42	47.7
7	E-books	40	45.5
8	Search Engine	49	55.7
9	Own Website	42	47.7
10	File Transfer Protocol	3	3.4
11	Digital Collection/Archives	38	43.2

The findings from table 1 shows that the Internet resources/services that are mostly used by the respondents are electronic mail (e-mail) services with 85(96.6), e-journals 71(80.7), search engines 49(55.7%), world wide web and online database 48(54.5%), Online public access catalogue and own website 42(47.7%), e-books 40(45.5%), Digital collection 38(43.2), Internet chat/discussion group 21(23.9), and file transfer protocol 3(3.4). It is observed that the respondents do not explore the vast knowledge preserved in OPAC, Digital collections, and e-books. They use e-mail service more than others. This is because e-mail service is important for every researcher to communicate their ideas or thoughts among them and they can send digital files to others as attachment.

4.2. The Purpose for Which Researchers Use Internet Services

Table 2 shows the analysis of data pertaining to this issue

Table 2. The purpose for which researchers use Internet services.

S/No	Purpose of Using Internet	Total	
		Freq	%
1	To search and obtain data for research and publication	86	97.7
2	To access electronic journals	80	90.9
3	For sending and receiving e-mail	86	97.7
4	To obtain routine information on conferences, seminars and job vacancies	64	72.7
5	To access online newspapers	58	65.9
6	To identify and approach experts in the field area	16	18.2
7	To access books electronically	44	50
8	To chat with friends and colleagues	23	26.1
9	To use search engine to access information generally	52	59.1
10	Downloading software	8	9.1

From table 3 above, 86(97.7%) of the total respondents admits that they use Internet mostly to search and obtain data for research and publication, and for sending and receiving e-mails; 80(90.9) affirm that the use it to access electronic journals; 64(72.7%) indicates that the use it to obtain routine information on conferences, seminars and job vacancies; 58(65.9%) admits that they use it to access online newspaper; 52(59.1%) of the respondents says the use it for search engines to access information generally; 44(50%) indicates they use it to access books electronically; 23(26.1%) affirm that they use it to chat with friends and colleagues; and 8(9.1%) of the respondents says the use it to download software. This shows that the respondents use the Internet resources/services available in these libraries not only to search and obtain data for research and publication, but also for sending and receiving e-mail and other activities.

4.3. Preference for Internet Search Engines Use to Locate Information on the Internet

The analysis of the data pertaining to this issue is shown in table 3

Table 3. Search engines researchers prefer to use to locate information.

S/No	Internet Search Engines	Responses	
		Freq	%
1	Google	88	100
2	Yahoo	85	96.6
3	Alta Vista	6	6.8
4	MSN	12	13.6
5	Yandex	9	10.2
6	Excite	-	-
7	You tube	47	53.4
8	Bing	9	10.2
9	Ask	5	5.9
10	Wikipedia	21	23.9
11	Lycos	-	-

The table 3 above shows that 88(100%) of the respondents

Table 5. Challenges encountered using Internet Resources.

S/No	Challenges	Responses	
		Frequency	Percentage
1	Slow Internet Service	82	93.2
2	Restriction of Access by library staff	-	-
3	Erratic power supply	17	19.3
4	Difficulty in finding relevant information	14	15.9
5	Internet connection failure	83	94.3
6	Inadequate number of connected system	46	52.2
7	Unavailability of support for maintaining Internet facilities	29	33

From table 6 above, 83(94.3%) of the respondents agree that Internet connection failure is one of the challenges to effective use of Internet service in the libraries studied. 82(93.2%) of the respondents indicates that slow Internet service is one of their major problem, 46(52.2%) of them are of the view that inadequate number of connected system is one of the impending factors. Also, 29(33%) of the respondents are of the view that unavailability of support for

prefer to use Google to search for and locate information on the Internet, followed by Yahoo 85(96.6%), and YouTube 47(53.4%); meanwhile 21(23.9%) indicates using Wikipedia; MSN 12(13.6%); Yandex and Bing 9(10.2%); Alta vista 6(6.8%) and Ask 5(5.9%). From the analysis, it is observed that Google and Yahoo search engines are widely used as compared to other search engines because, information contained in these search engine is updated regularly; their links are provided to websites in the world; and they are fast in accessing information.

4.4. Satisfaction Derived from Using the Internet by the Academic Staff

The analysis of the data pertaining to this issue is shown in table 4

Table 4. Level of satisfaction derived from using the Internet by the academic staff.

Degree of Satisfaction	Frequency	Percentage
Very Satisfied	4	4.5
Satisfied	43	48.9
Unsure	3	3.4
Dissatisfied	29	33
Very dissatisfied	9	10.2

Table 4 above shows the level of satisfaction with the use of Internet by academic staff in the libraries studied. From the analysis, it is found that a total of 4(4.5%) were very satisfied with the Internet resources/services provision; 43(48.9%) were satisfied, 3(3.4%) were unsure, while 29(33%) were dissatisfied and 9(10.2%) were very dissatisfied.

4.5. Challenges Encountered Using the Internet

The analysis of the data pertaining to this issue is shown in table 5

maintaining Internet facilities is of a challenge to them; 17(19.3%) admits that erratic power supply is one of the problems to proper use of the Internet, and 14(15.9%) indicates that difficulty in finding relevant information is a challenge to them, and none of the respondents see restriction of access by library staff as a challenge. This means that the major challenges faced by academic staff in their quest to use the Internet service in libraries studied is internet connection

failure; slow internet service; inadequate number of connected system among others.

5. Conclusion

Based on the findings, the study concluded that academic staff of the institution uses e-mail service more than other internet services, because e-mail service is important for every researcher to communicate their ideas or thoughts among them and they can send digital files to others as attachment. The study equally revealed that majority of the academic staff makes use of the internet to search and obtain information for research and publication, send and receive e-mail, access e-journals and other activities. The study also revealed that academic staff use Google and yahoo search engines more than others for their information search because their links are provided to websites in the world and also, they are fast in accessing information online. Furthermore, the study indicates that academic staffs are satisfied with the internet services provided though with some challenges such as internet connection failure, slow internet service, inadequate number of connected systems.

Recommendation

- (1) Efforts should be made to increase the speed of the Internet access and shorten the time it takes to view and download web pages by providing more bandwidths.
- (2) Management of the institution should install internet services that will connect all the offices of the academic staff. This will afford all academic staff irrespective of their status access to internet services.
- (3) More recent models computers should be provided and be connected to internet facilities in the libraries for patrons use.
- (4) A maintenance programme should be put in place for regular maintenance, up-grading and repairs.
