Gonca Demir. Phonotactic Properties of Turkish Folk Music Phonetic Notation System/TFMPNS: Urfa Region Sample. *Humanities and Social Sciences*. Vol. 3, No. 4, 2015, pp. 125-132. doi: 10.11648/j.hss.20150304.11

Abstract: Turkish folk music has a privileged place in music types due to regional dialect varieties. The future of Turkish folk music depends on protection of its attitude originating from dialect differences and its resistance against change. Turkish folk music regional dialect properties are transcribed by Turkish Linguistic Institution Transcription Signs/TLITS depending on linguistic laws in axis of phonetics, morphology and parole existence. On the other hand, depending on musicological laws, regional dialect properties of Turkish folk music which is a verbal/artistic performance type structured in axis of linguistic approaches in ethnomusicology-performance/display theory are also transcribed by Turkish Linguistic Institution Transcription Signs/TLITS. It is determined and approved by linguistic/musicology source and authorities that this reality which is also present in other world languages can be transferred to notation and vocalized again and again in accordance with its original through International Phonetic Alphabet/IPA existence and usability of which have been registered by local and universal standards through the notification that will be submitted. In order to initiate an application parallel to applications in national/international platforms a suggestion was made under the scope of ITU SBE TMP Post Graduation Program thesis, it will be developed under the scope of ITU SBE MJT Doctorate Program thesis, therefore Turkish Folk Music Phonetic Notation System/TFMPNS based on Turkish Linguistic Institution Transcription Signs/TLITS and International Phonetic Alphabet/IPA sounds in axis of linguistics/morphology measures together with local/universal attachments will be introduced; the conveying and adaptation processes of phonotactic properties (defined as a field of science examining the voices that may and may not be placed respectively in a language, phonology/voice combination/voice coalescence rules) to Turkish Folk Music Phonetic Notation System/TFMPNS will be realized. Gele Gele Geldim Bir Kara Dasa folk music text which is one of the 128 melodious poetical literature examples transcribed by Urfa/Kerkük/Tallâfer Dialects Turkish Linguistic Institution Transcription Signs/UKTD TLITS and musics recorded live in music assemblies between years 1967-1987 and phonograph records were selected as sample material (together with voice record compiled from a source person who is expert in the regional music and universal correlations) that will be examined by phonotactic theory/analysis method according to scientific compilation rules. Besides, detailed emphasize will be made on Turkish Folk Music Phonetic Notation System of Phonotactic Awareness Skill Development Processes/TFMPNS PASDP-Turkish Folk Music Phonetic Notation System of Phonotactic Therapy Applications/TFMPNS PTA-Turkish Folk Music Phonetic Notation System of Phonotactic Probability Calculator Database/TFMPNS PPCD.

Keywords: Phonetic, Phonotactic, Turkish Folk Music

1. Turkish Folk Music Phonetic Notation System Phonotactical Awareness Skills Development Processes/TFMPNS PASDP

Phonotactic features of Urfa Turkish folk music, keeping their existence in the axis of sound information criteria in performance and theoretical infrastructure of local language

properties: ĩ, ũ, ũ and ô (narrow, semi-narrow o), ê (close e) and î (long i) sounds which are the narrow, flat, half-round and closed shapes of i, u, ü sounds close to e were determined in addition to a, e, ı, i, o, ö, u, ü sounds located in Turkish in Turkey. In terms of continuity neither short nor the long vowels (except the words ‘aşık and yâr) are in the normal length. Vowels belong to the words which are entered to the language from Arabic and Persian are often normalized: such as ħammām>ħemam “hamam” etc. With long i resulting from the

reduction or adjustment of sound, long i in the taken words located in the poems written in divan poetry form retain their lengths during the usage. In Turkish all vowels except ı sound have normal lengths. This property of Turkish effects the taken words too. In Urfa's dialects just like in all East Anatolian dialects, long vowels from the taken words are shortened systematically and turned to the normal length vowels. For example maḥmūr>maḥmur "sleepy, silly" etc. As a result of the transformation of second singular person suffix n into y in Urfa dialect and sometimes completely removing even this y sound, it is seen that i sound at the end of a word is voiced in a long tone: For instance ettin>ettiy>ettī "ettin" etc. o, ö vowels in Urfa dialect are located only on the first syllable in accordance with the Turkish general rule. It is seen that -yor, continuous time suffix which is never be used in Urfa dialect, started to be used in both form by breaking the general rule: like gidiyor, gidiy "gidiyor" etc. In addition to the sounds b, c, ç, d, f, g, h, j, k, l, m, n, p, r, s, ş, t, v, y, z in Turkey Turkish written language, ğ, ħ, ħ, k, ' (ayın) and ' (hemze) sounds were determined. There is no j sound in Urfa dialect. Just like in Old Anatolian Turkish, this sound is only seen in the taken words. Only the word vicdan>vijdan formed as a result of the change c>j in local folk music compilation is detected. Depending on the general sound rules of Turkish, c, ğ, l, m, v sounds are located among the sounds which are not found in the beginning of the words and b, c, d, g, ğ at the end of a word or syllables. On the contrary to the general sound rules of Turkish, b, d, ğ sounds are seen in the foreign words like kebāb>kebab "kebab", etc. c and ğ are seen at the end of both Turkish words like hem dağ>dağ "yara" etc. and taken words like ḥarāc>herac "haraç" etc. Sound ğ has been used at the end of a word and syllables in old Turkish and it is a

sound found today in some Turkish dialect except Western Turkish. This situation is not a rule which has finalized and used widely in Urfa dialect. In the taken words which is ended with toned consonants, it is seen that these sounds are untuned, for example maḥsūd>maḥsūt "maksat" etc. In the sound lyrics belong to Urfa region, ñ "nazal n" nasal consonant ve j sound are not found but ñ sound transform into ng, g, n, v, y sounds: as in yeñi>yēngī "yeni" etc.

It is reported that Phonotactical features existing in the axis of shape information in theoretical and practical background of local dialect properties of Urfa Turkish folk music: sound changes: vowel changes (thinning of thick vowels-thickening of thin vowels-rounding of flat vowels-flattening of round vowels-narrowing of wide vowels-widening of narrow vowels-transformation of narrow/round vowels into semi narrow/round vowels), consonant changes (toning/un-toning/continuing/discontinuing/some changes among continuous consonants/other changes), sound events (affinity/consonant formation/dropping/twinning/formation/falling/merging/bumping/narrowing of middle syllable/changing location/syllable fall/shortenings in the names), harmony (vowel harmony/consonant harmony-vowel/consonant harmony).

Phonotactical features existing in the axis of shape information in theoretical and practical background of local dialect properties of Urfa Turkish folk music: Arabic-Persian translations, metaphorical meanings, shape and usage types of local words located in 128 song text belong to Urfa region, even though they are removed from Turkey Turkish written language, they are used in Urfa dialect widely are given under the title index and dictionary, respectively [1] (refer with: Table 1).

Table 1. Turkish Folk Music Phonetic Notation System Phonotactical Awareness Skills Development Processes/TFMPNS PASDP developed in the axis of local/universal structural/generative/transformation linguistic theories, linguistic/written science/rhetorical/phonological approaches in ethnomusicology, phonetic/phonetic-morphological info/syntactic-sound assets/the lexical criteria.
