Abstract: The major purpose of this study is to examine the assessment of entrepreneurship education for skill acquisition and job generation by business education students in Bayelsa State, Nigeria. This study adopted a survey design because the study sought to determine the opinion of the respondent on Assessment of Entrepreneurship Education for Skill Acquisition and Job Generation by Business Education Students in Bayelsa State, Nigeria. The population of this study consists of all three and four hundred level business education students in the Department of Vocational and Technology Education in Bayelsa State. The sample size for the study was one hundred and twenty-five (125) students representing 45% of the population. The proportionate stratified random sampling technique was used in drawing the sample for the entire population and which is considered to be representative of the whole population. Based on the findings, the following recommendations are proffered: The youths should be properly encouraged to become entrepreneurs through implementation of relevant policies, in order to forestall the problem of graduate unemployment in the region; The National Directorate of Employment (NDE) should intensify effort to re-orient unemployed graduate on the benefits of not solely relying on Government for paid jobs.

Keywords: Entrepreneurship Education, Skill Acquisition, Job Creation, Business Education

1. Introduction

Entrepreneurship as a concept evolved many centuries ago and it has formed the basis for economic growth and development. It has been defined in different ways by various people.

Entrepreneurship education refers to programmes that promote and provide skill training for business generation and development [1]. Also, Alberti, Sciascia and Poli [2] define entrepreneurship education as the structured formal conveyance of entrepreneurship competencies which in turn refers to the concepts, skills and mental awareness used by individuals during the process of starting and developing their growth oriented ventures. Another view of entrepreneurship education is the term given to someone who has innovative ideas and transforms them to profitable activities [3]. Entrepreneurship education is the type of education which has the ability to impact on the growth and development of an enterprise through technical and vocational training [4]. According Atakpa [5], entrepreneurship is the aspect of education which equips an individual and creates in the person the mindset to undertake the risk of venturing into something new by applying the knowledge and skills acquired in school. Still, to Fashua [6], entrepreneurship education creates the willingness and ability in a person to seek out investment opportunities in the society and be able to establish and run an enterprise successfully based on the identified opportunities. This means that entrepreneurship education helps to provide business education students with the knowledge, skills and innovation to encourage entrepreneurship in variety settings.

Entrepreneurship education particularly in Nigeria is structured to achieve the following objectives according to Paul [7];

1. To offer functional education for the youths so as to enable them to be self-employed and self-reliant.
2. To offer graduates with adequate training that will
enable them to be creative and innovative in identifying novel business opportunities.

3. To provide university/colleges graduates with adequate training in risk management to make certainty bearing feasible.

4. To provide the young graduates with enough training and support that will enable them to establish a career in small and medium sized businesses.

5. To offer graduates adequate training in the acquisition of skills that will enable them meet the manpower needs of the society.

6. To stimulate both individual and economic growth of rural and less developed areas.

7. To provide both small and medium business enterprises with opportunity of recruiting graduates who are trained and tutored in the skills relevant to the management and operation of small businesses.

8. To inculcate the spirit of perseverance in the youths and adults which will enable them to persist in any business venture they embark on.

However, the extent to which a graduate can be expected to become more enterprising as a result of their entrepreneurship education will inevitably vary from person to person. It depends on the extent to which they demonstrate some or all of the following: personal skills, attributes, behavioural and motivational capacities which can be used in any context (social, work, leisure etc). Prominent by these are: intuitive decision-making, capacity to make things happen autonomously, networking, initiative taking, opportunity identification, creative problem-solving, strategic thinking, self-efficacy, ability to cope with ambiguity) and having empathy with entrepreneurial ways of doing, thinking, feeling, communicating, organizing and learning. Skill does not depend solely upon a person’s fundamental, innate capacities but must be developed through training, practice and experience an individual acquired. Skill according to Bolt-Lee and Foster [8] is the art of possessing the ability to power, authority, or competency etc. to do the task required of an individual on the job. Two fundamental issues are used when a skill is to be acquired. According to Okoro and Ursula [9], the first is the conditions which promote acquisition and the second is the change that will occur when the skill is acquired.

However, when an individual set out to learn a new skill, he usually starts with a communicable programme of instruction. Good learners do not jump into an operation without first receiving the necessary verbal instruction. Thus the instruction given in bits, units modules in stages, perhaps must be fused together to form a skilled performance.

There are many processes of acquisition and development in achieving entrepreneurial skills. Pleshette in Okoro and Ursula [9] outlined the four main stages of acquisition and development of entrepreneurial skills to include:

- Identify the entrepreneur’s own personal goals, objectives and analyze and evaluate his/her own skills and resources in relation to these.
- Produce a realistic personal development plan for the potential entrepreneur.
- Monitor on-going performance on follow-up of the entrepreneur once the business has started and progress made towards developing the new skills that had been previously identified as necessary for the success of the business.

1.1. Statement of the Problem

Entrepreneurship education is a sort of intervention programme which was introduced into Nigeria’s tertiary education sub-sector in 2006 to remedy the unemployment challenge; and redirect the attention of our youths/graduates towards job generation by instilling in them relevant entrepreneurial skills that will positively grow and develop the economy. The goals and objectives of the programme seem laudable and for these goals and objectives to be achieved, some machinery has to be put in place. The relevance of this programme in the curriculum of all tertiary institutions in Nigeria is geared at creating an entrepreneurial culture and entrepreneurial spirits in the students.

It was against the background that the researchers intend to investigate the assessment of entrepreneurship education for skill acquisition and job generation by business education students.

1.2. Purpose of the Study

The major purpose of this study is to assess of entrepreneurship education for skill acquisition and job generation by business education students. Specifically, the study sought to:

i.) Examine the extent to which entrepreneurship education could contribute to acquisition of skills by business education students for job generation in Bayelsa State.

ii.) Assess the perceptions of business education students on entrepreneurship education as a tool for reducing unemployment by student in Bayelsa State.

iii.) Identify the strategies for enhancing entrepreneurship education for business education students in Bayelsa State.

1.3. Research Questions

The following research questions were formulated to guide this study:

i.) To what extent does entrepreneurship education contributes to acquisition of skills by business education students for job generation in Bayelsa State?

ii.) What is the perception of business education students on entrepreneurship education as a tool for reducing unemployment by student in Bayelsa State?

iii.) What are the strategies for enhancing entrepreneurship education for business education students in Bayelsa State?
2. Methodology

2.1. Research Design

This study adopted a survey design because the study sought to determine the opinion of the respondents on Assessment of Entrepreneurship Education for Skill Acquisition and Job Generation by Business Education Students in Niger Delta Bayelsa State.

2.2. Population of the Study

The population of this study consists of all 106 three hundred level and 171 four hundred level business education students in the Department of Vocational and Technology Education of the Bayelsa State, Wilberforce Island. The population therefore was two hundred and seventy-seven.

Table 1. Population Distribution of three and four hundred level Business Education Students in the Department of Vocational and Technology Education.

2.3. Sample and Sampling Techniques

The sample size for the study was one hundred and twenty-five (125) students representing 45% of the population. The proportionate stratified random sampling technique was used in drawing the sample for the entire population and which is considered to be representative of the whole population.

2.4. Instrumentation

The instrument used in obtaining data for this study was self-constructed questionnaire titled ‘Assessment of Entrepreneurship Education for Skill Acquisition and Job Generation by Business Education Students’ (AEESAJCBES).

2.5. Validity and Reliability of Instrument

The instrument was face validated by three experts in business education and measurement and evaluation and was tested for reliability using Cronbach alpha formula and a reliability of 0.87 was obtained. The questionnaire items were rated using a four point likert scale and nominal values were assigned thus; Strongly Agree (4) Agree (3) Disagree (2) Strongly Disagree (1).

2.6. Method of Data Analysis

The data collected were analyzed using descriptive statistics of mean and standard deviation. The level of agreement with each questionnaire items was determined based on the midpoint for the scale, which is 2.50. Mean scores of 2.50 and above were taken as agreed while mean scores below 2.50 were taken as disagreed.

3. Conclusion

Based on the study it can be concluded that entrepreneurship can reduce unemployment among business education students in Niger Delta university, Bayelsa State, Nigeria.

Recommendations

Based on the findings, the following recommendations are proffered.

1. The youths should be properly encouraged to become entrepreneurs through implementation of relevant policies, in order to forestall the problem of graduate unemployment in the region.

2. The National Directorate of Employment (NDE) should intensify effort to re-orient unemployed graduates on the benefits of not solely relying on Government for paid jobs.

3. The National Poverty Eradication Programme (NAPEP) should as a matter of serious concern make funds available to all the registered graduates of Entrepreneurship education to set up their business enterprises.

4. The enterprise college set up by the government should enroll graduates of Entrepreneurship education for them in order to acquire practical skills.

Acknowledgement

The authors wish to thank the students in the Department of Vocational and Technology Education who served as respondents and also to the reviewer of this work for his corrections and suggestions.
