Received: April 5, 2018; **Accepted:** April 23, 2018; **Published:** May 15, 2018

Abstract: Government procurement regulations require efficient implementation and remedy systems to achieve the goals of public procurement and protect the suppliers' business opportunities. In the phase of awarding public procurement contracts, the establishment of a more independent and professional organization will increase the authority, credibility, and efficiency of dispute resolution in complaint processing. In order to protect the rights and interests of the participants, the public procurement suspension procedures should be further improved; the application of the Alternative Dispute Resolution (ADR) system such as mediation, arbitration, etc, should be encouraged. When a supplier claims damages for losses due to illegal activities, it should use a more diversified dispute resolution mechanism. The remedy system in the awarding phase of public procurement contracts can enable China's public procurement system to better meet the needs of the Government Procurement Agreement (GPA) and enable Chinese companies to participate in international competition fairly and effectively. China should establish professional and independent complaints resolving institutions. Improve the suspension procedures for the dispute settlement in the Public Procurement contract awarding phase.

Keywords: Remedy System, Contract, Award Phase, Government Procurement, China

1. Introduction

Public procurement involves multiple parties, including government Procurer, procurement agencies, unspecified suppliers, procurement supervision agencies, and the public, which makes the diversity of legal relationships in public procurement and the complexity of the dispute remedy.

The bidding, tendering and reviewing of disputes during the award phase of the government procurement contract, the design of the challenge complaint system, is the key to the sound development of the government procurement system. In any countries (regions). The government is the largest procurement entity, and the competition among suppliers who participate in government procurement is intense fierce. This has led to high frequency of disputes in the procurement's tendering and awarding phases. Prior to the implementation of laws and regulations, such as the "Government Procurement Law" [1], suppliers often have nowhere to seek assistance for public bidding or public law. The establishment of a

government procurement challenge-and-complaint mechanism ensure suppliers' remedy and protection. The remedy system is also in line with the Government Procurement Agreement (GPA) requirements for the protection of suppliers' rights, which is significant for opening the procurement market and increasing suppliers' participation [2].

The works, goods, services procured by the government are closely related to the national economy and the people's livelihood [3]. They are complex and have a wide range of impacts. Once a dispute arises, it affects not only the government procurers and the participating suppliers, but also affects the quality and efficiency of the provision of public services by the government. Therefore, the disputes in government procurement need to be solved quickly and effectively, the challenge and complaint mechanism should meet this demand.

During the award phase of public procurement contracts, government procurers, successful bidders, and unsuccessful suppliers are protected by the government procurement

system. Suppliers are involved in government procurement activities and have the essential characteristics of pursuing maximum benefits. The suppliers and the government procurers are in an equal transaction relationship, and the procurement entities must not infringe on the supplier's rights. Remedy to the damages of suppliers by government procurement will not only minimize the damage of suppliers, but also realize value for money for government procurement effectively.

2. Two models of the Public Procurement Challenge and Complaint Mechanism

GPA is a plurilateral agreement which aims to standardize the behavior of members, to promote the openness of government procurement market and to achieve greater liberalization of world trade [4].

In order to ensure that the GPA rules are implemented, the GPA requires the procuring entity to comply with the procurement rules and correct the irregularities promptly through the supplier's challenge and complaint mechanism.

The GPA clearly requires each member to provide the supplier with "prompt, effective, transparent and non-discriminatory" complaint procedures for domestic

disputes, and stipulates challenge and complaints agencies, remedy procedures [5]. The WTO Government Procurement Committee passed the new GPA on March 30, 2012. The changes related to the new GPA remedy system include: First, some changes have been made to the members' domestic challenges and complaints procedures (such as reduce the demand for the independence of the complaints processing institutions, etc.). And the second is to resolve the dispute over the scope of GPA agreement (Article 19, paragraph 7) through arbitration procedures. According to the 1994 and 2012 GPA rules, when it comes to the disputed complaint resolving agencies, members can choose between two models:

Model 1 Single-institution, single-channel model. That is, only the court or an independent administrative review agency is authorized to handle the supplier's challenges and complaints.

Model 2 Multi-agency, multi-channel model. That is, through a number of agencies, multiple channels, through one or more procedures to solve the supplier's challenges and complaints.

Based on the above two models, This paper has summarized the challenge and complaint procedure of the public procurement contract about the typical countries or regions.

Table 1. Two models of Government procurement challenge and complaint procedures.

MODELS	TYPES	REPRESENTATIVES	CONTENTS
Model 1 Single-institution, single-channel model.	Authorizes the court to handle supplier's challenges and complaint through judicial review.	United Kingdom	A typical representative of Common law. The High Court, which deals with both civil and administrative cases, is responsible for handling complaints from government procurement suppliers [6].
		France	Representatives of civil law countries. Administrative courts that are specifically responsible for administrative cases resolve government procurement supplier complaints.
		Italy	The administrative court is responsible for deciding whether to suspend the procurement process after the supplier has filed a complaint and whether to cancel the procurement decision made by the government procurer. Ordinary courts are responsible for deciding whether to compensate the supplier for damages [7].
		Japan	In 1996, the Government Procurement Review Board was set up to solve the complaints and complaints of the government procurement suppliers [8].
Model 2 Multi-agency, multi-channel model	Authorizes the independent administrative agency to resolve supplier's challenge and complaint through administrative review.	Hong Kong	At the end of 1998, The Review Body on Bid Challenges was established to deal with complaints lodged by suppliers [9]. In 2014, it formulated the rules for the Operation of Tender Complaints Tribunal Organizations. The tendering and adjudication organization resolves the complaint filed by the supplier and is final.
		United States	Government procurement suppliers can choose to file a complaint directly with The Government Accountability Office or The United States Court of Federal Claims, suppliers can also decide whether to file a complaint with the government procurer first [10].
		Denmark	Denmark's suppliers can either choose to submit the complaint to the Public Procurement Complaints Committee for settlement, or the suppliers can choose to go directly to the court. If the supplier disagrees with the settlement decision of the Public Procurement Complaints Committee, it may appeal to the High Court.
		Greece	The use of two agencies, two channels, two-stage procedures, such as the requirement of the supplier's challenge and complaint must be submitted to a general or independent administrative agency before they can appeal to the court. Suppliers must first file complaints with the Public engineer Department or other administrative department responsible for supervising the procurement before resorting to administrative or civil courts seeking judicial remedies.
	Multi-institution, multi-channel, and Strictly step by step review.	Taiwan	The supplier first question the public procurer, and if the suppliers dissatisfy with the procurer's reply, they then appeal to the Public Procurement Appeals Review Committee and could file administrative lawsuits if the suppliers did not accept the complaint resolution.

MODELS	TYPES	REPRESENTATIVES	CONTENTS
		Germany	The primary review body for resolving public procurement supplier complaints is the procurement office of the Federal Bureau of Competition (Vergabekammer). If suppliers are not satisfied with the decisions they have made, they may seek judicial remedies from the procurement court (Vergabesenat des Oberlandesgerichts) of the Appeal Court. Complaints caused by domestic government procurement are resolved by the purchasing unit. If the complainant is dissatisfied with the result, the suppliers can directly sue in court.
		Korea	In international bidding, if the bidding company believes that the procurer entities have violated the government procurement agreement during the procurement process, the suppliers may first challenge the procurers and seek solutions through negotiation. If the two parties fail to reach a consensus, the bidder may file complaint with the Korean International Contract Disputes Mediation Committee to request an award.

The controversy in the award phase of China's government procurement contract is to adopt the "three-institution, three-channel, and three-phase" approach. The public procurement supplier or potential supplier first challenges the procurers or the procurement agencies. If the suppliers are dissatisfied with the answers, they can file a complaint with the financial department at the same level. If the suppliers are still not satisfied with the complaint, they have the right to file an administrative

reconsideration or administrative litigation (Articles 10 and 19, Order No. 94 of the Ministry of Finance of China).

In 2007, the OECD used a questionnaire to study the main members of European Union (EU) domestic review and remedy system during the award phase of public procurement contracts [11]. Most EU member states have set up special public procurement review agencies to resolve disputes in the award phase of public procurement contracts [12].

Table 2. Dispute review agency in the public procurement contract award phase.

countries	Agency Names	Countries	Agency Names
Austria	Federal Public Procurement Offices and regional institutions)	Bulgaria	Commission on the Protection of Competition
Cyprus	Tenders Review Authority	Czech Republic	Office for the Protection of Competition
Denmark	Complaints Board for Public Procurement	Estonia	Public Procurement Commission
Germany	17 Public Procurement Chambers	Hungary	Public Procurement Council with its specialised arm, the Arbitration Committee
Latvia	Procurement Monitoring Bureau	Malta	Appeals Board of the Department of Contracts
Poland	Public Procurement Office (managing the system of arbitrators)	Romania	National Council for Solving Legal Disputes
Slovakia	Office of Public Procurement	Slovenia	National Review Commission for the Review of Public Procurement Award Procedures

In conclusion, the main characteristics of dispute resolution in the government procurement contract award phase include:

Firstly, In the award phase of the contract, whether directly seeking judicial remedy or administrative remedy, legislators are fully aware of the significance of negotiations between suppliers and procurers, encouraging and prompting suppliers and procurers to resolve disputes on their own [13].

Secondly, in the selection of specific judicial remedies channels, whether a supplier initiates a civil action or an administrative action, the choice depends on the specific recognition of the nature of government procurement by the legal traditions of different countries [14]. For example, Germany has filed a civil lawsuit [15]. France is categorized as an administrative act and can only lodge an administrative lawsuit [16].

Thirdly, attach importance to adopting a diversified dispute resolution mechanism. In the dispute resolution method of the public procurement contract award phase, challenge or complaint is an alternative remedy. In addition, the supplier may apply for mediation. For example, in Korea, "suppliers may first question the public procurer and seek solutions through negotiation. If the two parties fail to reach a consensus, the bidder may file a complaint with the Korean International Contract Disputes Mediation Committee to request an award".

Suppliers can also directly initiate litigation without complain or challenge at first. For example, in the United States, "a dispute with the procurer's contractor is not a prearrangement for filing an objection to the Federal Audit Office, and the supplier can either choose the procurement officer or the Federal Audit Office to requests administrative review and may also choose to conduct judicial proceedings in the Federal Compensation Court or the Federal District Court".

Fourthly, in most countries or regions, regardless of the model of review adopted during the award stage of the public procurement contract, a special public procurement review body will be set up to manage the review process and allow relevant experts to participate in public procurement dispute resolution.

3. Cases Analysis on Dispute Resolution in Awarding Stage of Public Procurement Contract in China

Supplier's remedy is the essence of public procurement law [17]. In Chapter 6 of the "China Government Procurement Law", China has specifically provided a challenge and complaints mechanism for suppliers in response to the special

nature of the disputes during the awarding stage of public procurement contract, to ensure the effective operation of the whole government procurement legal system [18].

According to "China Government Procurement Law", the remedy mechanism for the award stage of government procurement contracts mainly includes inquiries (Article 51, China Government Procurement Law), challenge, complaints [19], administrative reconsideration and administrative litigation.

3.1. The Practice of Government Procurement Challenges and Complaints in China

Since 2012, the Ministry of Finance has dealt with 1194 cases of various government procurement cases (include reports, complaints, and active supervision and inspection projects). There were 361 complaint cases. Except for historical cases, 18 cases were administrative justice cases and the Ministry of Finance won the cases. The number of complaints handled by the Ministry of Finance as a whole showed an upward trend. According to publicly available information, the complaints involve improper contents of the tender documents, inconsistent bidder qualifications, unsatisfactory bid products, unfair tendencies in bidding activities, other illegal activities of the bid winner, misconduct of the purchaser, and procurement agents.

In order to standardize the unified enforcement judgment standards, reduce the flexibility of law enforcement discretion, correct implementation deviations of laws and regulations, promote the standardization of government procurement law enforcement, and maintain the government procurement market order, the Ministry of Finance issued 10 guiding cases for resolving government procurement challenges and complaints. The category of the cases include 7 complaint cases and 3 report cases, covering the procurement of various types of goods, services, and works.

The dispute includes the procurer's illegal supplier qualifications, illegal agency procurement procedures, score criteria setting does not correspond to quantitative indicators of review factors, suppliers provide false materials for winning bids, malicious collusion, obtaining evidence by illegal means for making complaints, etc. From the results perspective, it includes the establishment of complaints, dismissal of complaints, invalid complaints. The parties are ordered to make rectification, and the suppliers and agencies are given administrative penalties [20]. The Ministry of Finance explores dispute resolution mechanisms in the stage of awarding public procurement contract. In recent years, the awareness of protection rights by the suppliers have been continuously enhanced, and cases of complaints accepted by financial departments at all levels have increased dramatically. In 2016, the cases number of government procurement complaints and reports reached 5,011, which were 1.5 times and 3 times of that in 2015 and 2014, respectively [21].

In order to deal with government procurement complaint cases in an impartial manner, China Ministry of Finance has explored and improved the resolving mechanism for procurement complaints.

First, an additional government procurement management

office is set up in the Ministry of Finance to handle and supervise the government procurement complaint procedure, and provide strong supports from the agencies and staff. The Ministry of Finance has set up a special complaint resolving office, a conference room, etc. The complaint procedure must be recorded.

Second, establish and improve the internal control system, and formulate 13 systems such as "Regulations for Handling Complaints within the Office", "Administrative Measures for the Government Procurement Expert Review Committee", "Code of Conduct for Complaints and Reporting Window", and "Confidentiality System", "system administrator", etc.

Third, hire legal counsel to assist in the participation of administrative adjudication. At present, it has hired 3 senior lawyers as consultants and formed 4 working groups, totaling 11 people.

Fourth, introduce the expert review mechanism. In the process of handling complaints, an expert review committee meeting is organized to focus on examination of complaints, and related evidence materials provided by experts used as basis and evidence for making decisions [22].

Fifth, in order to ensure fast and smooth channels for the protection of suppliers' rights, a government procurement complaints reception window has been set up, and public telephone and address information have been disclosed. The "Government Procurement Complaint Window Code of Conduct" was formulated, requiring staffs to respond to stringent specifications [23].

3.2. Judicial Cases in the Awarding Stage of Public Procurement Contract

3.2.1. The Analysis of Judicial Cases in the Challenge and Complaint Procedure

In order to study the dispute of the awarding stage of government procurement contract, this paper analyze the judicial cases in recent years. Before December 30, 2017, there were 325 public procurement lawsuits triggered by complaints. According to the classification of cases, administrative cases accounted for about 94%, civil cases accounted for about 5%, and criminal cases accounted for about 1%. According to the division of trial courts, the number of cases handled by basic courts accounted for about 49%, the number of cases handled by intermediate courts accounted for about 44%, and the number of cases handled by high courts accounted for about 7%. According to the division of trial procedures, the number of cases in the first instance accounted for about 54%, cases in the second instance accounted for about 44%, and retrial cases accounted for about 2%.

Through studying 325 judicial cases, the court supported a total of 45 cases of suppliers, accounting for approximately 13.85%. For the plaintiffs (suppliers) to sue the financial department or the government departments that have made administrative reconsideration, the results of the judgments made by the court mainly include 7 different situations. (1) Order the financial departments to re-determine the complaints of the plaintiffs (suppliers). (2) Revoke the administrative reconsideration decision made by the

provincial (city or county) government. (3) Revocation of the “Government Procurement Complaint Processing Decision Statement” made by the defendant’s financial department or the tendering authority. (4) A decision of the defendant (Financial department) to make a determination that the facts are not clear. To violate due process and to apply the law wrongly shall be revoked according to law. (5) The defendant who first tried to make the appeal was found unclear in the administrative reconsideration decision, and the request for reconsideration was omitted and should be revoked. (6) The defendant should make a reconsideration decision on the reconsideration application matters of the appellants. (7) The court determined that the administrative reconsideration decision made by the government was illegal and confirmed that the financial department’s handling of government procurement complaints was illegal.

The civil cases involved in the public procurement contract award stage include: (1) Damage to business reputation, unfair competition, infringement of commercial secrets, etc. (2) Disputes between successful bidders and government procurer and government procurement agencies. (3) The original successful bidder refused to accept the “reorganization of procurement” and filed a civil lawsuit. (4) The second place winner filed a challenge and complaint against the first

successful bidder and requested compensation for the loss of the sample. (5) The unsuccessful suppliers sued the court and demanded the government procurer to compensate for the bidding fees, and the court refused to support it [24].

3.2.2. *Beijing Modern WO ER Economic and Trade Co., Ltd. Sued China Ministry of Finance*

Among the complaints disputes resolved by the Ministry of Finance, the most significant one was the complaints of Beijing Modern WO ER Economic and Trade Co., Ltd. has started its complaints in 2003 and continued into 2017. In September 2003, the State Council of China approved the National Development and Reform Commission and the former Ministry of Health in the preparation of the “Planning for the Construction of Medical Emergency Management System for Public Health Emergencies”. According to this requirement, the former Ministry of Health as a government procurer, the commissioned procurement agency, GUOXIN TENDERING, conducted an open tender for the medical treatment system project in October 2004. The tender number is GXTC-0404038. Modern WO ER Economic and Trade Co., Ltd. (hereinafter referred to as Modern WO ER) to participate in the D package of blood gas analyzer of the tender, which is the bid item for which the case was filed.

Table 3. The process of the case of Modern WO ER complaint.

Time	Process
December 21, 2004	The successful bidder of the project is the Guangdong Kaiyuan Medical Equipment Co., Ltd. (the company name changed to Guangdong Kaiyuan Medical Technology Co., Ltd.).
December 22, 2004	Modern WO ER challenged GUOXIN’s bid but did not receive a satisfactory answer.
January 7, 2005	Modern WO ER complained to the Ministry of Finance about the leading group of the National Health Care System of the Ministry of Health and the National Medical Treatment System Leading Group of the National Development and Reform Commission.
March 23, 2005	Modern WO ER believes that the Ministry of Finance did not handle and respond to its complaints and filed an administrative lawsuit with the court of first instance.
December 8, 2006	The court of first instance made an administrative judgment and ordered the Ministry of Finance to handle and respond to the “Current Complaints of the Modern Wall against the Organization’s illegality in Bidding for the Complaint Project”. The Ministry of Finance did not accept the first-instance judgment appeal to the Beijing Higher People’s Court.
November 21, 2012	The Beijing Higher People’s Court made a final judgment, dismissed the appeal and upheld the judgment of first instance.
March 2014	According to the requirements of the Ministry of Finance, Modern WO ER confirmed that the respondent was the former Ministry of Health. On March 27, 2014, the Ministry of Finance made a “Notice of Responding” to the National Health and Family Planning Commission and GUOXIN TENDERING, and forwarded a copy of the complaint. State Health and Family Planning Commission and GUOXIN TENDERING submitted written explanations on the complaints and provided relevant evidence and legal basis.
April 2014	The GUOXIN TENDERING and National Health and Planning Committee submitted written responses to the Ministry of Finance.
May 9, 2014	The Ministry of Finance made a decision on the handling of the case. In this process, the Ministry of Finance did not notify Kaiyuan Medical to participate in the complaint handling procedures, and subsequently did not deliver the decision on the indictment to Kaiyuan Medical. Due to the dissatisfaction with the complaint, Modern Wall appealed to the court of first instance (Beijing No. 1 Intermediate People’s Court).
June 19, 2015	The first-instance court made an administrative judgment: the defendant’s Ministry of Finance’s decision on the handling of complaints made by the Ministry of Finance on May 9, 2014 was revoked; the defendant’s Ministry of Finance should, within the statutory time limit, reopen the complaints of the plaintiff’s Hyundai Trading Co., Ltd. Decision. The Ministry of Finance did not accept the judgment of first instance and appealed to the Beijing Higher People’s Court to request the court of second instance to quash the first-instance judgment.
March 18, 2016	The Beijing Higher people’s Court made a second instance of administrative judgment, rejected the appeal and upheld the judgment of first instance.
May 15, 2017	The applicant for the retrial of the Ministry of Finance has decided not to accept the administrative decision of the Beijing Higher people’s Court and applied to the Supreme People’s Court for retrial. During the review of the Supreme People’s Court, the Ministry of Finance petitioned the Supreme Court to withdraw the retrial application on the ground that it had reprocessed the decision. The Supreme People’s Court has issued an administrative ruling on retrial review and trial supervision: The Ministry of Finance of the People’s Republic of China is allowed to withdraw applications for retrial.

Modern WO ER’s challenge and complaint concerning the “National Packages for Medical Treatment System (No. GXTC-0404038) Package D—Blood Gas Analyzer” began on

December 22, 2004, and went to the Supreme Court on May 15, 2017. This case lasted nearly 13 years. Although this case has some certain degree of particularity, it also reflects the

existence of problems in the remedy system of China's public contract awarding stage.

3.2.3. *The Case of Compensation for Damages in the Awarding Phase of Government Procurement Contract*

In the award phase of the public procurement contract, the

damaged supplier may request the government procurement entities and other entities to compensate. According to the "wenshu.court.gov.cn". This paper has summarized the typical cases in which Chinese courts have accepted damages in the awarding phase of government procurement contracts before December 2017.

Table 4. The cases of compensation for damages.

Case Names	Case Contents
Hunan Province Construction Engineering Group Corporation v. Jiujiang City Forestry Bureau Bidding Tender Dispute Case	The liability for the award phase of the public procurement contract shall apply to the provisions of liability for negligence in the conclusion of the contract. The bid evaluation committee's decision to abolish the winning bid is an erroneous interpretation of the administrative regulations and violates the honesty and credit in the contractual contracting process. The losses caused to the bidder shall be borne by the commissioner of the bid evaluation committee (the tenderer) Jiujiang Kelinsuo. The bid bond has the characteristics of deposit, and the bidder shall double return the bid security to the bidder. The tenderer Jiujiang KeLinSuo provided compensation for the direct losses of the plaintiff Hunan Jianzhong.
Dalian Xinsheng Fire Engineering Co., Ltd. and Dalian Aric Electromechanical Equipment Co., Ltd. appealed for infringement disputes in bidding.	The facts confirmed in the "Complaint resolving Decision" are related to the trial results of the civil lawsuit in this case. However, after Xinsheng Company became aware of the resolving results of the "Complaint Resolution Decision", it deliberately refused to receive the "Complaint resolving Decision", resulting in the administrative procedures have not yet ended. Therefore, the court of first instance ruled that the lawsuit of Xinsheng Company should be dismissed and that Xinsheng Company should not initiate a civil action after the end of the administrative procedure.
XX Bidding Center and XX Co., Ltd. colluded with bid unfair competition dispute appeal	The "Tendering Document" issued by the XX Bidding Center is an offer invitation, not a contract, and colluding unfair competition disputes is a joint infringement complaint. Therefore, the court of first instance has jurisdiction over the case.
Jiangxi Kang Ying Medical Technology Co., Ltd., Zhanjiang Business exhibition company, and Guangdong Province, the second People's Hospital, Guoyi Bidding Co., Ltd. collusion in the bidding of unfair competition disputes retrial civil adjudication	Collusion bid unfair competition disputes. The focus is whether the lawsuits of Huanzhou Company and Chen Dongmei meet the admissibility criteria. This case is a dispute of unconscionable bids and is a dispute of infringement. Huanzhou Company and Chen Dongmei submitted preliminary evidence for their claim and should be deemed to have direct interest in the case. Huan Zhou Company and Chen Dongmei filed the lawsuit in accordance with Article 119 of the Civil Procedure Law. Whether Huanzhou Company and Chen Dongmei are qualified for bidding and whether their claims can be supported are issues identified by the entity and the court will not review it at the phase of procedure review.
Plaintiff Mei-NaiEr Furniture Co., Ltd. and the defendant Zhongshan construction project management office, Guangdong province electromechanical equipment Tendering Center Co., Ltd. tender and bid for sale contract dispute first Instance civil judgment	The perpetrator shall be liable for infringement if he or she has infringed upon the property rights of others by mistake. The defendant Guangdong Electronic mechanical Tendering Co., Ltd. was entrusted by the defendant Zhongshan Office of Construction to organize a bid for the project involved in this case. After receiving the questioning letter from the plaintiff, Mei-Nai Er Company, it did not find that the situation affecting the fairness of the procurement result was promptly corrected. The input losses of the plaintiffs for participating in bidding are irrecoverable, and the defendant should bear the liability for compensation for the plaintiff's losses in bidding. There is no direct causal relationship between the plaintiff's claimed loss of profits and the defendant's actions.
The plaintiff Huaihua Hongyu Printing Factory dissatisfied with the defendant Huaihua Finance Bureau procurement tender administrative acts and administrative compensation case	The plaintiff claimed that there was no factual or legal basis for the claim. Therefore, the court did not support the plaintiff's claim. The defendant Huaihua Finance Bureau violated the administrative action of the government procurement bid for the "2017-2018 annual fixed-point printing agreement provision for administrative institutions at Huaihua City level" project.

Regarding the awarding phase of government procurement contract, the main disputes of the damages in the complaint include: collusion bidding improper competition dispute (tort liability), contracting fault liability, civil jurisdiction, administrative compensation in administrative lawsuit, compensation scope, etc.

Summarizing the typical cases in China's government procurement disputes compensation for damages, it can be seen that when a party seeks compensation through a civil lawsuit, it generally receives support from the court if there is sufficient evidence. The scope of compensation includes direct losses and does not include loss of expected benefits. Civil liability shall be allowed to be dealt with through ADR, including conciliation, negotiation and arbitration [25]. However, the use of arbitration must require prior clarification.

If the parties agree to submit the dispute to the arbitration of this Council, the arbitration rules apply. The arbitration agreement refers to the agreement that the parties agree to submit the dispute that has occurred or may occur in the specific legal relationship between them [26]. Arbitration agreements include arbitration clauses in contracts or arbitration agreements concluded in other written forms. The arbitration agreement exists independently and is not affected by the validity of the contract. There must be an arbitration agreement, etc, when applying for arbitration. Therefore, in the government procurement challenge and complaints procedure, the relevant parties can reach an arbitration agreement with the responsible entities, clearly by the specific arbitration body to deal with the dispute between the two parties.

4. Analysis of the Remedy Issues in the Awarding Phase of Government Procurement Contract

4.1. Poor Remedy Effect of Complaints in the Awarding Phase of Government Procurement Contract

The characteristics of the government procurement remedy mechanism established in China's "Government Procurement Law" includes: the combination of internal remedies and external remedies, the combination of administrative review and judicial review, the multiplicity of remedy methods and the complexity of procedures, the supplier can file a complaint to the government Procurement supervision only after challenging. Those who are not satisfied with the complaint can conduct administrative reconsideration or administrative litigation. This remedy approach seems complete, but there are many problems in the process of law application.

Whether the challenge and complaint procedures are effective? The "China Government Procurement Law" stipulates the challenge procedure, but the procurer and the procurement agency seldom set up an independent challenge resolve agency, and there not exist specialized institutions to handle the challenge. Most of them are handled by unprofessional staffs.

China has adopted a multi-agency, multi-channel, and step-by-step review model in the award phase of government procurement contracts. According to the provisions of the "Government Procurement Law", "Administrative Procedure Law", and the "Administrative Reconsideration Law", suppliers complained after the challenge and then filed a lawsuit with the court [27]. The processing time was too long. Judging from the judicial review, the remedy sought by supplier does not resolve disputes quickly and effectively, which do not meet the requirements of government procurement.

The supplier is not satisfied with the complaint resolution and whether it is effective to sue the court. When a supplier complains to the financial department, its purpose is to request the financial department to rectify the illegal behavior of the procurement organization. When the supplier is not satisfied with the handling of the complaint, the remedy from the "Government Procurement Law" in China to the supplier points to an administrative reconsideration or administrative litigation.

According to judicial practice, the vast majority of suppliers cannot obtain effective remedies through judicial channels, and judicial trials do not involve disputes between public procurers (or procurement agencies) and suppliers, but rather the supervision of financial departments or government. Whether the administrative reconsideration or administrative litigation with the financial department as the defendant can achieve effective remedy to suppliers [28]?

The practice of public procurement and judicial cases show that the implementation of public procurement law in China is not satisfactory, which has a great relationship with the limitation of efficiency and effective of the remedy system

established by our current public procurement law [29].

If the challenge and complaints case have gone through all the legal procedures, and exhausted all the remedies procedures, the suppliers still have no confidence in a public procurement decision, then the efficiency and effectiveness of such a remedy system is questionable [30]. Theoretically, once the suppliers enter the complaint procedure, this procedure may continue between the government and the court, and the dispute focus of the complaint is far from the public procurement decision itself. In other words, this procedure is of no value to the solution of the suppliers.

4.2. Government Procurement Resolving Complaints' Institutions Lack of Professionalism, Neutrality

According to China's government procurement challenge and complaints, suppliers' challenge at this phase play a minor role, most suppliers will complain about the response. It is difficult for government procurement to play an error-correcting function, and it is no doubt that the front procedure of complaint is an obstacle to error-correcting procedure. This not only reduces the efficiency of government procurement, but also increases the cost of suppliers. The number of successful complaints is generally lower than the number of rejections, the success rate of complaints is relatively low.

The institutions that deal with complaints in China are financial departments at all levels. Government procurement is complex and requires high technical and professional requirements. If it is not handled by a professional and specialized agency, it is more difficult to handle this issue through complaints to "quench" the dispute. This is also the reason why many complaint suppliers will still choose court litigation after filing the complaints.

China's complaint handling agencies are lacking in professionalism. Financial departments are involved in the procurement process and supervision, and their dispute resolving is not neutral. In the face of the increasing number of complaints, our government procurement disputes can not be handled well. This issue has gradually received the attention from Ministry of Finance of China, the supervisors emphasized the importance of perfecting complaints in government procurement, and required the supervisors to study and solve the problems in the construction of government procurement complaints specialization mechanism, and proposed to strengthen the design of government procurement administrative adjudication mechanism. In the handling of public procurement complaints, the financial department should maintain its neutral position as the arbiter [31].

4.3. The Issues of Suspension Procedures in the Awarding Phase of Government Procurement Contracts

The characteristics of suspension provisions in current public procurement legislation in China mainly includes:

First, China does not adopt automatic and semi-automatic suspension methods. Instead, it requires the reviewing agency

to decide whether to suspend the procurement procedure on a case-by-case basis.

Second, although the financial department was authorized to decide to suspend, there is no clear condition for the suspension. The maximum period of suspension is 30 days.

The main problems of such a procurement suspension includes three aspects. (1) It is impossible to suspend the procurement process when dealing with all complaints against government procurement activities. (2) In the multi-level supplier complaint Review Mechanism, the procurement process is likely to be suspended only during the administrative review phase. (3) There is no clear suspension standards. The possibility of a suspension of the procurement procedure mainly depends on the discretionary capacity of the financial sector.

In this lengthy multi-level supplier complaints review mechanism, the "Government Procurement Law" only expressly provides that the financial department may suspend the procurement process during the processing of complaints. At other phases of supplier complaint, the procurement procedure can continue. As a result, without final settlement of the dispute, the procurement contract was signed or even fulfilled.

Based on the existence of the above problems, in practice, it is not uncommon for complaints to have been resolved but the contract has been fulfilled. This has seriously damaged the effectiveness of China's supplier remedy mechanism. On the one hand, Due to the lack of suspension procedures, suppliers cannot obtain business opportunities to participate in procurement competitions even if they win. This will hurt the supplier's complaint review mechanism and even affect the market's confidence in the entire procurement system. On the other hand, the illegal procurement contract can still be signed and performed, which may cause the illegal procurement entities or transaction suppliers to continue to violate the rules in the future procurement activities. This will undoubtedly affect the implementation of government procurement rules, government procurement policy objectives, and the healthy development of the government procurement system.

5. Improvement Suggestions for Remedy System in the Awarding Phase of Government Procurement Contract

5.1. Alternative Dispute Resolution in the Awarding Phase of Public Procurement Contract

The complete legal logic of regulating the awarding procedure of public procurement contract in China: good government procurement operation Mechanism-improve the use efficiency of government procurement funds-obtain the most reasonable market purchase price-introduce sufficient market competition-give the purchaser a mandatory competitive obligation and supplier fair competition rights-a fast and effective right remedy mechanism. One important approach of remedies is to construct the Alternative Dispute

Resolution (ADR) mechanism in china's public procurement contract awarding phase [32].

When suppliers seek compensation for damage caused by others' illegal activities, in addition to the lawsuit (Article 79, "Government Procurement Law"), the suppliers may protect their rights through ADR methods such as consultation, mediation and arbitration, etc [33]. In 2016, the Supreme People's Court of China issued the "Opinions on further deepening the reform of pluralistic dispute resolution mechanism in the People's Court", special attention was paid to mediation. And the term "mediation" appeared 156 times. When the supplier adopts litigation remedies, the court may initiate a mediation system. Court mediation can take place before, during, and after the trial. China should encourage the application of various forms of ADR approach in public procurement remedy [34]. Specialized and professional dispute-resolving institutions can participate in the entire process of public procurement, provide remedy to suppliers and other entities, and avoid bad impact caused by the unsolved disputes on the procedure of public procurement [35]. ADR mechanism will have a positive impact on the efficiency of disputes resolution in the awarding phase of government procurement contracts.

5.2. China Should Establish Professional and Independent Complaints Resolving Institutions

The exploration made by the Ministry of Finance of the People's Republic of China in the government procurement complaint handling mechanism reflects its emphasis on complaints. However, from the perspective of practical development, China should pay attention to the public procurement complaints handling mechanism at all levels of the country. An independent and professional complaint handling agency should be established to improve the effectiveness of dispute resolution.

The value of an professional-neutral remedy system is that it can resolve disputes and protect the business opportunities and interests of suppliers involved in procurement quickly and effectively.

Any mechanism that may promote the objectivity and specialization of the complaint mechanism can be considered and designed under the existing legal framework, including the establishment of an independent and professional complaints handling committee, and the operation of this committee should have a category of "arbitration mechanism" [36]. China should improve the function of the remedy system in public procurement, other than the overall reform of the legal system.

From the perspective of improving the remedy system, it is feasible and necessary for independent and authoritative government procurement institutions to specifically handle suppliers' complaints [37]. This professional body should follow the principles of non-discrimination, timeliness, transparency and effectiveness, and allow it to take quick and temporary measures, if necessary, to suspend the procurement process. The authority institutions that have been challenged should have the right to correct the illegal decisions of the

procurement entities, in order to maintain the suppliers' business opportunities or require the procurement agency to compensate the supplier for losses.

Independent complaint handling agencies should allow the public to participate in and improve the finality of the processing results. The institution should pay attention to the dispute resolution of the entire public procurement process, and improve the efficiency and credibility of dispute resolution. More experts are encouraged to introduce to take part in challenge and complain procedure. Professional or technical disputes involved in public procurement projects can be resolved through expert adjudication, and increase the effect of result.

In addition to improving the efficiency of the independent procurement decision-making agency, it is more important to uphold the legitimacy of the institution's resolving procedures. That is, when handling complaints, it is necessary to concern the opinions of the parties and must give them the right to state their opinions and submit evidence. To avoid the possibility of infringement of the legitimate rights and the stakeholders in the absence of corresponding procedural guarantees.

5.3. Improvement Suggestions of Suspension Procedure in the Awarding Phase of Government Procurement Contract

The suspension of public procurement is of great significance in the public procurement remedy system. There are two kind of the dispute suspension systems in the award phase of the public procurement contract.

First, apply uniform rules in public procurement to resolve all complaints involving procurement activities. Use a suspension of procurement process in complaints against any government procurement activities.

Second, when the supplier seeks external remedies-resort to administrative review or judicial review - the "semi-automated suspension" approach recommended by the "United Nations Commission on International Trade Law Public Procurement Model Law" is adopted. The procurement process is suspended for seven days before the review agency decides whether to extend the suspension period according to the complaint supplier's request.

Automatic suspension methods are not suitable to recommend to adopt or apply during the challenge phase. Automatic suspension can cause excessive interference with the procurement process. In order to strike a balance between the protection of the suppliers and the avoidance of the excessive interference with the procurement process, the semi-automatic suspension recommended by the Model Law that can be adopted in china [38]. China clarifies specific application conditions based on the actual situation.

6. Conclusion

Government procurement remedy mechanisms are conducive to achieving good governance [39]. The remedy system in the awarding phase of public procurement contract can better guarantee the realization of the value goals. Such as the fairness

and efficiency of public procurement, promote the professionalism and efficiency of public procurement dispute Resolution in China, facilitate the reform of government procurement, transform government functions, improve the supply of public services and the timely resolving of disputes over public procurement activities, and reduce the unnecessary damage. Efficient remedy system can also avoid the confrontation between the traditional dispute settlement mechanism, which is beneficial to the government and suppliers to maintain a benign relationship. It is in the interests of the Government procurement entities and the suppliers. For the governments, it can enable civil servants to focus on their day-to-day work rather than in protracted litigation battles. The introduction of ADR into the field of public procurement is fundamentally consistent with the goal of quick and effective dispute settlement system. China should deepen the reform of government procurement under the principle of openness, transparency, prompt, effective and fair competition, etc.
