Abstract: Archival documents are a vital source for historical writing. This article draws on extensive experience with the archives of the Regional Directorate of the Cadastre of Constantine, Algeria, to provide researchers from around the world a guide to one of the real estate laws implemented during the French occupation of Algeria. Specifically, the article examines the Advisory Council of the Senatus from 1863, which laid the foundation for individual land ownership replacing collective land ownership that previously existed. The Algerian tribes were divided according to a new administrative system by the law, reflecting the French perspective. The law also aimed to census the population and their livestock. This law, applied during the second half of the 19th century, has rich documentation in maps, plans, and documents, which can be found today at the Regional Directorate of the Registry of Constantine. Using descriptive and statistical research methods, this study presents the archival models and the role of land law in shaping the new characteristics of the Algerian countryside. The study explores the significant changes that have occurred in agricultural and pastoral traditions, as well as the methods of agricultural land ownership.

Keywords: Algerian Countryside, Real Estate Legislation, Inventory of Local Archives, Inspection and Extrapolation, Tribe and Douar

1. Introduction

Algerian society has established land ownership traditions in the rural world as a result of experiences dating back to different historical periods, when these traditions were transformed into a culture through which it practices agricultural production and livestock breeding, and provides for its necessary needs. In addition to exporting surplus wheat production to Europe in the 18th century, but after the occupation of Algeria by France in 1830, its administration enacted a set of land laws that differed from local Algerian culture, the most famous of which is the law of the Senatus-Consulte, promulgated under the reign of Napoleon III on April 22, 1863. One of the stated aims of this land law was to share agricultural and pastoral land between Algerian tribes and immigrants from Europe, but its implementation was not easy as it found a local land tenure system and historical traditions in the way agricultural land was farmed. It thus became an intrusive tool that targeted everything local, such as the solidarity of tribal members in cultivating their land and protecting their collective interests. Therefore, how did

this law alter the appearance of the Algerian rural areas since the latter part of the 19th century? What are its major lasting impacts?

The archives of the Senatus-Consulte law remained in Algeria after independence in 1962, and the French authority did not transfer them to France like its various archives, their balance in Algeria being divided between the chief towns of the three prefectures: Constantine, Algiers, Oran. As a result, the archives of this land law, applied in the eastern part of Algeria, exist today at the regional directorate of cadastre in Constantine city, attached to the Ministry of Finance. Therefore, this research study addresses crucial questions, including how these archives are maintained and organized, and what their significant contents are?

2. Real Estate Legislation Characterizes Algerian Countryside

The historical economy of Algeria indicates the tyranny of

the peasant tradition in its narrow nature, which is translated by rural utopianism as: homeland (in Arabic El Outane) and country (in Arabic El Beled), all of which are production areas of varying wealth and area, based on a symbiotic agricultural-pastoral system, the pillars of which were built on the duality of land and man [1]. However, with the wave of the French occupation, the legislator put forward an agenda aimed at changing the face of the Algerian countryside, whose features were drawn centuries ago. The threads of these colonial visions were woven through real estate laws, which turned into a mechanism to change the agricultural map and its historical structures. The most important of which was the Senatus -Counsulte law, that left devastating effects on the features of the Algerian countryside [2].

The law of Senatus-Consulte emerged as a result of directions during the era of the Second French Empire (1852-1870) adopted by several personalities such as Ismail Uraban, where Emperor Napoleon III called for the integration of the local populations component into the French system, by defining the spaces on which it lives and sharing the land between it, and among the Europeans, as a prelude to imposing individual ownership in place of collective ownership, which was a tyrannical real estate culture in Algeria before the occupation stage, and based on these perceptions, the Senatus-Consulte law was issued on April 22, 1863, entitled "Royal Law Concerning the Conditions of the Homeland of Algeria and Their Affiliation with the French State" [3].

This law intended to target the physical capital represented by the land with its social and economic background, as well as the formation of an information network about the Algerian tribes and the spaces in which they live. Algerian tribes, and thus the occupation administration formed a stock of knowledge about the rural community, through which it built its colonial agenda in this geostrategic space [4].

After examining the dozens of records that were drawn up on this law, we came to identify five goals that were woven from behind this law, which we summarize in the following terms: limitation, emptying, appropriation, dismantling, artificiality, closures. Within the borders of the land of the Arche¹, which turned into a real estate container to draw the borders of the tribes, in return, the segregation lands were emptied of the local element who was assigned to cultivate them in preparation for converting them into a material base for the movement of settlement and agricultural capitalist colonialism. For example the farmers of Oued Zenati tribe lived on sixty Azels (isolates)², with a total area estimated by the Senatus Committee at 43,138 hectares, of which the occupation administration allocated 3,050 hectares for the construction of the settlement village of "Sidi Tamtam" and concessions for the colon, and the rest of the estimated area is 40,138 hectares on which 1272 families lived, of which the

occupation administration recognized 411 individuals as allocating territory for them to live on [5].

After the recommendations of the Senatus-Consulte, Emperor Napoleon III issued a decree on November 02, 1865, according to which 411 individuals were transferred from the Zanati Valley Azels, and confined them to only four Azels, located west on the left bank of the Zanati Valley stream, which is the Ain Bernaz Azel with an area of 2831 hectares, Beled Djelili Azel with an area of 1723 hectares, Henanecha Azel with an area of 1120 hectares, and Ben Mazoura Azel with an area of 1773 hectares, with a total general area estimated at 7447 hectares, abandoned by the domain administration according to the previous imperial decree, and thus the occupation administration formed from the 411 individuals an artificial tribe, which had it bore its name from its origins, which is "Zanatiya". Therefore the tribal map that was drawn from the work of the Senatus-Consulte law in eastern Algeria does not necessarily reflect that social reality inherited from the Turkish period, as some groups and tribes were artificial by the French administration [6].

As for dismantling, its outputs were based on moving the rural community from the expanded tribe to the world of the douar³, through the spatial division of the tribes and dividing them into entities of varying wealth and population known as the douar commune. The Segnia tribe which lived southeast of Constantine, was divided by the committees into eight douars which are as follows: 1. Ouled Sakhar (sons of Sakhar) 2. Ouled Khaled 3. Ouled Jahish 4. Ouled Qasim 5. Ouled MUSAAD 6. Ouled Ashour 7. Ouled Sebaa 8. Ouled Si louinice [7].

These douars were turned into arbitrary entities in which the delegated committees mobilized individuals and groups that were extracted from their original tribes in order to transfer them to a project of integration into a new fabric, which made the tribe lose its historical harmony, its social and economic unity, its productive solidarity and its real estate support based on the concept of the land of the Arche⁴. And he turned the tribe into marginal administrative entities that lived through the structural turmoil that was reflected in the formations of the agricultural-pastoral scene, within extraneous European concepts, the most important which was the formation of the municipal land inside the douar, in order to achieve continuous revenues that flow into the municipal treasury [8].

One of the dimensions of this law is the artificiality, the pillars of which were based on displacing groups from different tribes and heterogeneous families and moving them to a project of merging into a new fabric within the same douar, so that they lose their social unity and historical harmony, and among the manifestations of this fabrication during the second half of the nineteenth century Beni Hemaïdan tribe in the Semendou Basin (surrounding Constantine city), which was formed by the Senatus Committees by bringing together 67 families from the Azels:

1 - Land of tribe

2 - A type of farming property that was distributed to senior employees during the Turkish era, and make the city isolated from its tribal surroundings.

3 - Local name that means the cercle of tents.

4 - Land of tribe.

Michta Ben Sharif, Koudiat Hanach, Takuk, Al Houima, Oum Hadidan, Mechta Nahar, Bani Hemaïdan. Where most of the families from which the occupation administration formed the artificial tribe had their origins from the desert (from Oued Souf), as for Bani Hemaïdan, which bore the name of the tribe, their families originated from the bosom space extending between Sour al-Ghazlan and Sidi Issa in the territory of M'sila [9].

Finally, one of the objectives of the Senatus-Consulte Law, is to destroy the traditional economic structure of the pastoral tribes by closing their roaming lands and limiting their movement. Any social form can withstand this policy, which was not the result of accumulating internal changes to ensure natural change, but was due to extraneous external factors, which created a state of functional dispersion and disrupted the production cycle after breaking the traditional pastoral axes, the most important of which is the vertical axis that used to occupy the hill tribes. On seasonal trips that lead them at the beginning of the winter season to the desert, to return with the beginning of the spring season to their home. Thus, Senatus-Consulte (1863) formed the legislative base that drew the features of the Algerian countryside after the coup against its real estate, social and economic system that had been in place for ages [10].

3. Preview Real Estate Records and Plans

The Senatus-Consulte Archives, situated in the regional directorate of the cadastre of Costantine, currently houses two distinct types of archives. The first one consists of 283 files written by the commissions in charge of the implementation of the law, according to the number of historical and artificial tribes, in the province of Constantine, arranged alphabetically according to the first letter of the name of the tribe in French, these files are kept in special reservoirs at the level of the documentation office. The records vary in size, some up to 30 centimetres thick, such as those of the Ouled Khïar tribe (Sons of Khïar) or the Harakta tribe, while others are as small as those of the Long Lake and Beni Hamidan tribes. The result of this variation in size and content is a reflection of the size of each tribe, the size of their agricultural and animal wealth [11].

These records were handwritten in which black ink was used, and the mother tongue of the occupation (French) was employed in them, along with some records in which some pages of reports written in Arabic were mentioned. The records included documents that were appended to its first pages, represented in the imperial decrees that were signed by Emperor Napoleon III, and acknowledged the end of the establishment of the works of the Senatus-Consulte in that tribe, or some of the amendments that occurred in their field. For example Ameer Cheraga tribe that lived surrounding of Constantine city, after inspecting and adjusting its real estate map inherited from the Turkish period, the committees proceeded to empty their Azels lands from the peasants and

mobilize them within the borders of the land of the Arche, this process that was a declaration of the end of a situation that had existed since the era of the governor Salah Bey (1771-1792) who these lands were organized until the year 1863, when a new phase began in which capitalist colonialism would spread across these plains, coinciding with the commitment of Emperor Napoleon III to provide 100 thousand hectares for the major agricultural companies in Europe, so he hastened to empty the Azels lands and direct the movement of its residents to shelter areas that these committees had previously determined for them, a policy that in turn affected the lands of Ameer Cheraga Azels [12].

This process opened wide the field for deep disturbances in the economic and social system of the tribe, since the population density was previously distributed over a large area of agricultural lands that exceeded 31 thousand hectares, which made the per capita share more than the lands, and with a simple statistical approach, we divided 8597 people (the population census of Ameer Cheraga in 1865) on the total area, which is 31,890 hectares, 20 ares, we found that the per capita share was 06 hectares and 16 ares, but if the Azels lands were emptied, and their peasants were mobilized within the boundaries of the land of the Arche, whose area was estimated at 10,767 hectares, 20 ares, then the per capita share would be 01 hectares - 25 ares, which is the share that was concluded by the twelfth administrative committee, and recorded in its reports to the guardian authorities on February 15, 1865 [13].

In order to avoid imminent demographic disturbances that might leave an impact on the Azels lands, which became among the priorities of Emperor Napoleon III, in order to distribute them to the major agricultural companies, the Senatus Committee was forced to present a project to annex an area of 5977 hectares and 90 ares of Azels lands to the land of the Arche, a project that was discussed by the Council of Government. In its meeting on June 21, 1865, the project was submitted to Emperor Napoleon III, who signed an imperial decree on July 14, 1865 that came between the folds of the minutes of the Ameer Cheraga tribe, in which it stated [14]:

Napoleon, by the grace of God and national will, Emperor of France

Based on the general procedures of June 11, 1862 relating to the application of the senate council of April 22, 1863 in the provinces of the secluded.

Based on the file of the administrative committee.

Upon the report of the Secretary of State for War and the proposal of the Governor-General

Decide:

Article 1: The Ameer Cheraga tribe, Constantine Governorate, will be given an area of 5,977 hectares and 90 acres of Azels lands attached to the Arche land, which was indicated to be insufficient. It includes Azels lands next:

- No. 13. Al-Bashbashiya..... 818 hectares, 20 ares.
- No. 16. Ain Al-Hajar..... 498 hectares, 25 ares.
- No. 21. Ameer Al-Thlath..... 1236 hectares, 80 ares.
- No. 25. Beled Setitira..... 719 hectares, 55 ares.

No. 26. Ouled El Bey..... 148 hectares, 95 ares.
 No. 27. Ain Al-Mers..... 270 hectares, 70 ares.
 Section of Plot No. 22. Ouled Gouame..... 2285 hectares,
 45 ares.

Article 2: All other Azels in the base with an area of 15145 hectares and 30 ares remain under the domain management.

July 14, 1865

Signature of Emperor Napoleon [15].

In addition to records, the second archive of Senatus-Consulte, located at the regional directorate of cadastre, contains real estate plans and maps created by engineers from the Department of Topography who worked with committees. These plans were drawn on various scales: 1/20000, 1/ 10000, 1/40000, with various contents, the most important of which are: 1- The domain of the tribe inherited from the Turk period 2- The changes that occurred in the field of the tribe 3- The schemes of douars that emerged from the dismantling of the tribe 4- The schemes of collective investigation within each douar 5- The plans for the distribution of communal lands 6- Plans for communal lands (land Arch previously) inside each douar. 7- Plans for secluded lands that have been cut off from the tribe - if it has this type of land [16].

The office of plans currently preserves maps and plans, which are categorized based on the douars and the type of real estate study. Some of the archives are in good condition, while others have incurred damage or erosion along their margins. The individuals responsible for this department are presently engaged in electronically duplicating these documents. [17].

4. The Administrative Structure and the Content of the Records

The Senatus-Consulte, which overturned the local real estate norms, began its work by placing advertisements in public places in order to notify the concerned parties from the residents of one tribe and the interest of the Domain service, to prepare for the process that was arranged according to an administrative hierarchy, and its features began to appear on July 03, 1863 when Marshal Pélissier appointed the governor of Algeria has administrative committees entrusted with the embodiment of this law on the tribes, headed by an officer with the rank of brigadier general, colonel, or lieutenant colonel, and a deputy for him who is an advisor in the state (prefecture), or a member of the general council of the administrative district, along with an officer or assistant in the Arab office who are proficient in the Arabic language and have prior contact in rural groups [18].

Under the authority of this committee were secondary committees and other sub-committees directly related to the tribes. The report of the Aneur Cheraga tribe reveals that it was appointed by the twelfth administrative committee, which was formed by Biznons, Echam, Dargy. As for the sub-committee that Its work was in the field, and its members were the engineer Gonse Ainé, representative of the topography department, and Waroquier the First Lieutenant

in the arab office [19].

On the other hand, the first chapter of its third article of this law obliged each tribe to appoint members to represent it at the level of the administrative committees, among the oldest persons. Accordingly, and in order to know the historical area of the tribe agreed by tradition, the colonial administration appointed representatives of the neighboring tribes [20].

Furthermore, the delegated committee was permitted by the law to collect geographical, economic, and social data, as well as gain knowledge about the tribe's entire resources. The records are replete with information that can be used to support various studies and research, with this historical data being arranged in the following sequence: 1. The origins and history of the tribe 2. The type of real estate on which you live 3. Topography and forest wealth 4. Hydrographic wealth 5. Transportation methods 6. Agricultural activity 7. Trade 8. Industry 9. Market 10. The value of taxes imposed on the tribe 11. Population census 12. Livestock census 13. The phases of dismantling the tribe into douars [21].

5. The Tribal Phenomenon Deconstructed and Reconstructed

To comprehend the tribal community's historical experience in Algeria, the Senatus-Consulte committees codified the history of each tribe via subtitles initiated by each register: "History and origins of the tribe". It should be noted that this historical material is based on oral narrative

and popular memory. However, this did not prevent committees fluent in Arabic from conducting historical examinations, particularly because they understand the tendency of rural communities to claim the same lineage or association with honorable families. [22].

As it was drawn to our attention, after examining dozens of records, that this scrutiny included especially the tribes that lived along the main roads and economic ribs, and the tribes with wide domains and great families such as Al-Mouqrani, Al-Douaouda, Al-Hananecha, as historical ribs on which the Baylik (Departement) regime was built, which Its dismantling required a delicate surgical process that derives its starting points from the historical approaches, which turned into a ground for building a settler-colonial project with capitalist backgrounds, based in many aspects on the fertile geographical structure of Algeria and its abundance of large plain ranges with good yields in agriculture similar to the upper plains in the Constantine sector [23].

In the Setif plains of eastern Algeria was settled the Amer Dahra tribe, whose representatives stated that their origins were from the Arab tribe, which had immigrated from the Middle East during the twelfth century, but that the Senatus-Consulte Committee to ascertain this information returned to what was written by the first Arab historians, such as Ibn Khaldoune, so that the record of the tribe was written " According to the information we read in the books of Arab historians about the Amer tribe shows...". It is also interesting to note that the writings of French translated officers on the history of the tribes, such as Charles Féraud and Louis Rinn, became a database and reference for these commissions in the codification of tribal history. For example, the history of the Harakat tribe, who lived on the outskirts of Constantine, was written on the basis of the publication of the officer Charles Féraud in an edition of the African Journal in 1872 [24].

6. Building a Strategic Agenda with Information

After Europe's economic renaissance, during the second

half of the eighteenth century, it was accompanied by a cultural phenomenon that resulted mainly from the breadth of knowledge, and the European mind's attempt to understand and deal with the other in the hope of containing and guiding it. The French Administration has therefore worked to identify the strengths and weaknesses of the societies of the South Mediterranean and to determine the size of their wealth in order to provide an economic base and social welfare for the European communities that have lived in Algeria. Therefore, the minutes of the Senatus-Consulte law were built on this dimension, they were rich in counting the population of rural groups based on their sexual composition (males and females), age (children and men) and spatial (between the various departments). In addition to a comprehensive and accurate survey of the field of the tribe and the composition of its physical and chemical soil, the quality of its agricultural activities, the nature of its real estate containers and its total area, which are detailed in the records between forest wealth - if any - agricultural and pastoral lands, types of real estate ownership, and the method of distribution and exploitation,, the area and history of agricultural real estate since the late Turkish era, especially the lands of the Azels, which were a direct target for acquisition and confiscation by the occupation administration [25].

Also the records came rich in economic information about the Algerian tribes, which by their pastoral nature tend to spread and live around the springs and wells, whose names were detailed in these records, that depicted the features of the hydrographic wealth enjoyed by the tribe, as well as its weekly market - if any - and the network of roads and paths that penetrate its domain, and the nature of trade and industry - if any - , and the value of taxes that it pays, based on its wealth, similar to livestock, and the area of the tribes and their population. The following table presents the most important tribal data: 1. The name of tribe 2. Tribe record's number 3. The date of recencement 4. The area of the tribes 5. The census of the population 6. livestock of tribe. Of course this ata approach was the culmination of many minutes.

Table 1. Samples of tribal areas, population census, and livestock that appear in the records of the Senatus-Consulte.

7. From Tribe to Douar

The Senatus-Consulte Law archive offers ample and comprehensive records, including real estate plans that provide insights for researchers exploring a crucial inquiry: What was the effect of the French occupation on the Algerian countryside by relocating communities from tribes to douars?

This inquiry formed the core of the objectives of the legislation, which altered the spatial map of Algerian tribes by introducing new concepts unfamiliar to rural communities, including fixation, isolation, dismantling, and imposition of European-style borders. All these concepts are inconsistent with the reality of tribal life, where blood and solidarity ties

play a dominant role, and people live in open landscapes. The law created geographical-administrative units that resulted in a diaspora, dividing rural society based on tribal biases. As a consequence, the tribal component is now scattered across small douars of varying wealth and population, which the legislator defined as douar Commune. [26].

The research study entitled "The Arab Kingdom" by Annie Golzeiguer presents an approach discussing the phenomenon of tribal confederations in eastern Algeria, along with the higher division of the number of douars in comparison to the Algerian center and the west. These findings strongly support the proposal of a wealth of archives existing today in Algeria that focus on the theme of the "world of douar" [27].

8. Conclusion

The archive of the Senatus-Consulte, promulgated during the reign of Napoleon III on April 22, 1863, and which is located today in Algeria at the level of the regional directorate of the cadastre in Constantine city, constitutes a real historical wealth, which would give a strong and balanced impetus to historical studies concerned with the rural sector in Algeria, especially since this archive is still a

raw material. Currently, only experts in real estate or geographers specialized in topographical studies work on resolving judicial disputes between individuals. However, researchers in the field of history have minimal or no presence to conduct research on this archive, located in Algeria along with other archives. Similar to the archive of the civil status system that exists at the level of the municipalities of the national country, which is represented in the mother records and records of family trees, or the municipal archive similar to the records of the deliberations

that took place at the level of these councils. They are all archival funds distributed inside the Algerian country, and they need more attention by researchers, some of whom believe that writing the history of Algeria during the colonial stage greatly needs the role of foreign archives, similar to the overseas archives and the palace of Vincennes in France, which is the proposition that we tried in this paper. Research is to correct it, by directing researchers to archival spaces and centers inside Algeria that are rich in source material that would build us original studies.
